

2015-2018

South Island Health Services Plan

Produced in 2015

By the South Island Alliance Programme Office

On behalf of the five South Island District Health Boards

Telephone: 03 378 6631 PO BOX 639, Christchurch

FOREWORD

The South Island Alliance Board and Alliance Leadership Team continue to support and recognise the efforts of the South Island Alliance teams and District Health Boards (DHBs) in addressing the challenges we face within the region. We continue to make significant progress in developing relationships and aligning systems and processes across the region leading to a better experience of care and outcomes for our people. Examples of these include:

- consistent models of care for stroke, acute coronary syndrome and a dementia framework,
- HealthPathways (primary to secondary and secondary to tertiary)
- aligning of information systems
- single service multiple sites e.g. bariatric surgery, fertility services
- meeting of health targets including wait times and faster cancer treatment
- · working to align radiotherapy fractionations to defer the need for an additional linear accelerator
- workforce training including: 'dementia support walking in another's shoes', gerontology acceleration programme, advance care planning, allied health assistant.

The approaches are designed to support the DHBs to manage within current resources and to deliver services in the community where possible. While we have not made major service changes we have aligned the way we work and have supported the care of our people in the community. This supports DHBs to manage services without the need for additional facility beds and equipment.

This South Island Health Services Plan (SIHSP) progresses the activities of the South Island Alliance and draws from national strategies and key priorities, including the National Health Targets, the Minister's Expectations, and the Operational Policy Framework. The SIHSP actions are interwoven into each of the South Island DHB Annual Plans with a clear 'Line of Sight' across plans. The plans provide direction and guidance in terms of how the South Island Health System will operate and prioritise its resources and effort. This Plan has been developed taking all of these plans into account, as well as the Minister's Letter of Expectation which is appended to this plan (Appendix 1).

This plan continues to challenge how we work together, however, while acknowledging the efforts and energy of all involved and the progress made, we, as a region and as a country need to address the sustainability of our specialist services. The South Island Alliance recognises that decisions regarding provision of specialist services to our geographically dispersed population cannot be made in isolation from the other regions of New Zealand. The South Island Alliance undertakes to engage with the other regions in regards to reaching decisions around service provision.

While there are some activities underway to support our ageing and rural workforce challenges we will need to continue to focus on these areas to know we can continue to deliver healthcare to our population.

MINISTER OF HEALTH LETTER OF APPROVAL

Office of Hon Dr Jonathan Coleman

Minister of Health Minister for Sport and Recreation

Member of Parliament for Northcote

2 1 AUG 2015

Mr Chris Fleming Lead Chief Executive Officer for South Island Region District Health Boards Nelson Marlborough District Health Board Private Bag 18 Nelson 7042

Dear Mr Fleming

South Island Region 2015/16 Regional Service Plan

This letter is to advise you I approve the 2015/16 South Island Regional Service Plan (RSP). I appreciate the significant work that is involved in preparing the RSP and thank you for your effort.

Good progress has been made with regional planning this year, particularly in relation to the alignment between the DHB Annual Plans and RSPs. However, we must continue to strengthen this alignment in the future if we are to achieve the best use of resources.

As greater integration between regional DHBs supports more effective use of clinical and financial resources, I expect DHBs to make significant progress in implementing their RSPs during 2015/16 and to continue to work together to ensure service sustainability within the Region.

Regional Service Plan Agreement

My approval of your RSP does not constitute acceptance of proposals for service changes that have not undergone review and agreement by the National Health Board. All service changes or service reconfigurations must comply with the requirements of the Operational Policy Framework and the National Health Board will be contacting you where change proposals need further engagement or are agreed subject to particular conditions. You will need to advise the National Health Board of any proposals that may require Ministerial approval as you review services during the year.

My agreement of your RSP also does not constitute approval for any capital projects requiring equity or new lending, or self-funded projects that require the support of the Capital Investment Committee. Approval of such projects is dependent on both completion of a sound business case, and evidence of good asset management and health service planning by your DHBs.

I would like to thank all the people involved in developing the RSP for their valuable contribution and continued commitment to delivering quality health care to the population. I look forward to seeing your achievements throughout the year.

Finally, please ensure that a copy of this letter is attached to the copy of your signed RSP held by each DHB Board and to all copies of the South Island RSP made available to the public.

Yours sincerely

Hon Dr Jonathan Coleman Minister of Health

SOUTH ISLAND REGIONAL HEALTH SERVICES PLAN 2015-2018

Foreword

Appendix 4 – Membership Lists	85
Appendix 5 – Glossary of terms	90

1 EXECUTIVE SUMMARY

"Steering the course for a sustainable future"

Our vision is a sustainable South Island health system focused on keeping people well and providing equitable, and timely, access to safe, effective, high-quality services as close to people's homes as possible.

1.1 The South Island Context

With a total South Island population of 1,004,370 people (23.7% percent of the total New Zealand population), implementing diverse, but similar, individual responses duplicates effort and investment and leads to service and access inequality. Regional collaboration is an essential part of our future direction.

This South Island Health Services Plan progresses the direction and key principles that continue to inform regional service development, service configuration and infrastructure requirements.

The regional direction continues to be closely aligned to the national approach and is based on the following concepts:

- More health care will be provided at home and in community and primary care settings;
- Secondary and tertiary services will be provided across District Health Board boundaries;
- Flexible models of care and new technologies will support service delivery in non-traditional environments;
- Health professionals will work differently to coordinate a smooth transition for patients between services and providers; and
- Clinical networks and multidisciplinary alliances will support the delivery of quality health services across the health continuum.

We continue to work closely and challenge ourselves to look at and find solutions to the big issues. Our Service Level Alliances (SLA) and regional activities continue to grow and build on the work undertaken to-date to achieve the vision for South Island health services. The alliance approach means our District Health Boards (DHBs) are closely involved in all regional activity and are willing to share initiatives and support each other in managing operational challenges and developing new ways of working.

1.2 South Island Alliance Activity

The Alliance framework continues to support regional activity across a wide range of clinical and enabling services. Throughout this plan there are examples of achievements we have made and continue to make (see Gains through Regional Collaboration boxes), to improve the health, and experience of care for our population, while we consider how we ensure sustainability of our services. We recognise that the work to date is only a small start in the challenges we face to achieve our vision of "a sustainable South Island health system focused on keeping people well and providing equitable, and timely, access to safe, effective, high-quality services as close to people's homes as possible".

To support the 'Best for People, Best for System' strategic framework, we have developed and agreed to a set of eight high level outcomes.

- Improved environment to support health and wellbeing
- People have increased access to planned care
- People wait less
- People have prevented/delayed burden of long term conditions

- People have fewer and shorter episodes in care facilities
- No wasted resource
- People are protected from harm or needless death
- People die with dignity

These will assist us with measuring the changes we are making and identifying the activities and actions that will support us to achieve our identified strategic goals. This will support all our teams in understanding the impact that they are having or whether they need to refocus their approach.

2 INTRODUCTION

The South Island Alliance has brought together the region's five District Health Boards to work collaboratively toward a sustainable South Island health and disability system that is *best for people, best for system*.

Our vision to improve the patient journey and the health of the South Island's population emphasises the provision of equitable and timely access to safe, effective, high-quality services, as close to people's homes as possible, consistent with the Government's *Better, Sooner, More Convenient* strategy.

GAINS THROUGH REGIONAL
COLLABORATION
Audio-visual / videoconference solutions
to connect geographically distant clinical
MDM teams have been installed in all
South Island DHBs.

To do this, the South Island Alliance is supporting, existing regional networks to be well-connected and integrated, to align patient pathways, cut waiting times, improve quality and safety, and share information and resources. We are introducing more flexible workforce models and improved patient information systems to better connect the services and clinical teams involved in a patient's care.

By using our combined resources and the strength and experience of our people, our DHBs can collaboratively work towards this shared vision. This collaborative approach will put us in in a better position to respond with a whole of system approach to changes in technology and demographics that will significantly impact the health sector in coming years.

2.1 Our 2015-18 plan

This updated plan, the *South Island Health Services Plan (2015-2018)*, provides a framework for future planning and outlines the regions priorities for 2015-2018. It has been developed by the five South Island District Health Boards (Nelson Marlborough, West Coast, Canterbury, South Canterbury and Southern), and the primary care and community members of the Service Level Alliances and Workstreams. The Plan builds on the achievements and progress of the last four years as it develops a longer term direction for a sustainable South Island health and disability system that is *best for people*, *best for system*.

The South Island District Health Boards continue to work together at a regional level to make the best use of available resources, strengthen clinical and financial sustainability and increase access to services. The plan,

GAINS THROUGH REGIONAL COLLABORATION

Peter (a SI resident) has chronic renal failure and had a 'living will' prior to being introduced to ACP. Peter reports that with ACP he was able to go into as much detail as he liked, then talk it through with his GP to make sure that everything was OK and correctly recorded. He sees this process as much better as he does not need a legal process to make changes as he did with a 'living will'.

developed and supported by our clinical leaders, reiterates our health services planning processes and agreed framework for regional decision making. The work plans for the coming three years are based around the services we have prioritised for regional and sub-regional focus. The Service Level Alliances/Workstreams continue to focus their efforts on reducing service vulnerability and variability, costs and improving the quality of care provided to the people of the South Island. Appendix 3 outlines the work plans for each of the 2015- 18 Service Performance Priorities.

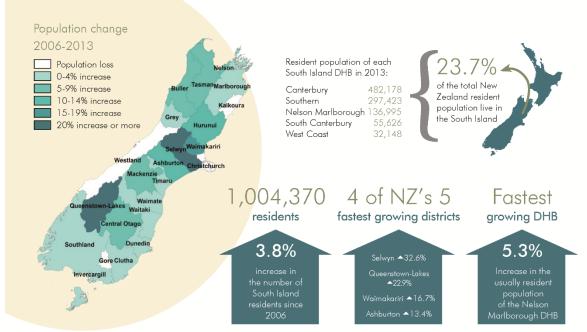

DHBs are now in a stronger position to continue implementing their regional and sub-regional priorities, as they work together to make the best use of available resources, to strengthen clinical and financial sustainability and increase and improve patient access to services.

2.2 Demographics

WHAT THE 2013 CENSUS TELLS US

The census was held on the 5th of March 2013, two years after it was cancelled as a result of the 2011 Christchurch earthquake and seven years after the previous census. Results indicate how the profile of our population has changed. These changes are crucial to the planning of future health services in the South Island.

The South Island's usually resident population has increased by 3.8% since 2006. This is slower than the 6.7% between 2001 and 2006.

Four of the five fastest growing districts in the country are in the South Island. Queenstown-Lakes, Selwyn and Waimakariri were also the three fastest growing districts last census.

There has been population loss in three rural districts: Kaikoura, Westland and Gore. These are relatively small numbers, with a decrease of less than 100 usual residents in each.

The high growth in areas such as Queenstown-Lakes and Ashburton shows there is not necessarily a population movement away from rural districts and towards the cities.

The Clutha and Southland districts have seen growth between 2006 and 2013, following decreases in the 2001 census.

The growth in the Queenstown-Lakes district appears to be contributing to the growth in the Central Otago district. The increases in population have occurred in the Cromwell and Dunstan areas.

Nelson Marlborough has had the highest rate of growth in the South Island between 2006 and 2013. Over half of this growth has occurred in Nelson City.

Canterbury DHB previously had the highest rate of growth of the South Island DHBs. This was disrupted by the earthquakes in the region. Christchurch City has seen a 2% decrease in usual residents since 2006, contributing to accelerated growth in the neighbouring districts of Selwyn and Waimakariri. Much of the growth in these districts has occurred in Christchurch's satellite towns, including Rolleston, Rangiora and Lincoln. Whilst residents may have left Christchurch City after the earthquakes, many are still living in the surrounding area.

For example, Dunedin City has increased by 1,560 usual residents since 2006, comparable to the increase in the number of usual residents in the Central Otago and Southland districts.

What Does This Mean?

Population growth around the South Island
The population continues to increase in many
rural areas of the South Island. Therefore,
the provision of general practice in these
areas is a key requirement, as well as mobile
community services that operate in people's
homes and communities.

Our aging population

The South Island has an increasing elderly population. While progress has been made to address the needs of older people, new service models will need to continue to be developed. The 25-44 year age group is an important age group for our health workforce. As this age group has declined since 2006 it may have implications our health workforce in the years to come.

Age

The South Island is continuing to age, and remains older than the rest of the country with 16% of our population now aged 65+, up from 14.0% in 2006. The proportion of the New Zealand population aged 65 years or older is 14.3%.

South Canterbury continues to have the highest proportion of residents aged 65 years or older (20.4%). Nelson Marlborough DHB has the fastest *growing* older population, with the proportion increasing from 14.8% in 2006 to 18.6% in 2013.

The number of South Island residents in the 25-44 age group has declined since 2006. The 25-44 year age group represented 27.2% of the South Island resident population in 2006, which has decreased to 24.6% in 2013.

Canterbury DHB has the highest proportion of residents aged 25-44 years in the South Island. Because of the Canterbury DHB's relative size, this increases the South Island proportion.

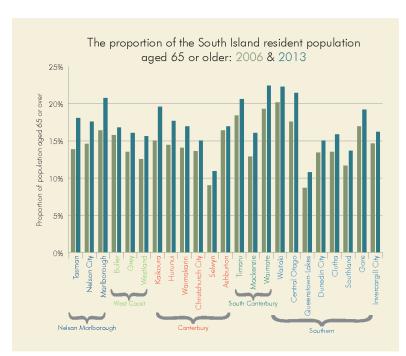

16%

of South Island residents are aged 65+, up from 14% in 2006

Fastest growing

65+ population of any South Island DHB is Nelson Marlborough

24.6%

of South Island residents are aged 25-44, down from 27.2% in 2006. This represents 16,400 fewer 25-44 year olds

8.7%

of South Island residents identify as Maori, a 1% increase since 2006

2.2%

of South Island residents identify as a pacific Island ethnicity, a 1.9% increase since 2006

5.5%

of South Island residents identify as an Asian ethnicity, a 4.3% increase since 2006

No change

in the number of families with dependent children in the South Island, despite an increase in the number of households

15%

of South Island residents aged 15 years or older are regular smokers, down from 19.9% in 2006

Ethnicity

The South Island population has become increasingly ethnically diverse since 2006. The proportion of the population that identify as Maori has increased from 7.7% to 8.7%. The proportion of the population that identify as a Pacific Island ethnicity has increased from 1.9% to 2.2%. The proportion of the population that identify as an Asian ethnicity has also increased, from 4.3% to 5.5%.

In contrast to the national population, the South Island continues to have a much higher proportion of the population that identify as European/New Zealander. 90.3% of South Island residents identify as European/New Zealander, compared with 75.7% nationally.

Data source: Statistics New Zealand, Census of Population and Dwellings, 2013

Figure 1: What the 2013 Census tells us

There has been no change in the number

of families with dependent children in the

South Island between 2006 and 2013.

However, three South Island DHBs have

South Canterbury (2.1% decrease).

seen a decrease in the number of families

with dependent children: West Coast (4.7%

decrease), Canterbury (1.2% decrease) and

2.2.1 The South Island Māori Population

The South Island MAORI POPULATION

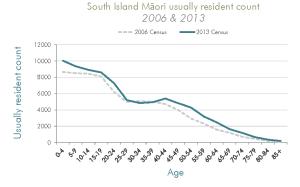

The graphs and figures on these pages present key data from the 2013 Census.

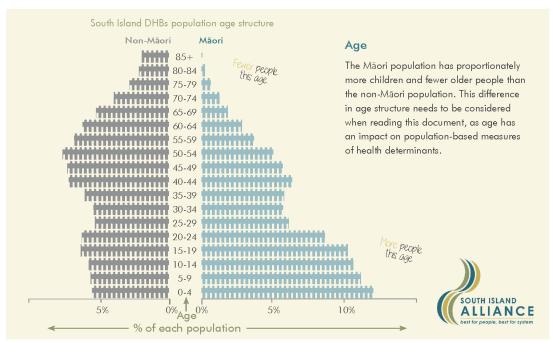

Socioeconomic deprivation, employment, income, qualifications, home ownership, household crowding, and cigarette smoking all affect people's health and are often referred to as 'broader determinants of health'. Collectively, these determinants have a greater impact on the health of a population than the health system itself.

Māori generally have poorer health status than non-Māori. This health inequity can be partly attributed to the differences in access or exposure to the broader determinants of health illustrated in this document. Monitoring these differences is the first step towards addressing them.

South Island DHBs each have a Māori Health Action Plan and a Public Health Plan, which are companion documents to the Annual Plan. These documents set out key actions and performance measures to improve population health and reduce inequities, including work to influence the broader determinants of health.

The South Island MĀORI POPULATION

Smoking Smoking is the single biggest preventable cause of illness and death in New Zealand. While rates are slowly decreasing, there is a long way to go before New Zealand achieves the 2025 smoke free goal (less than 5% smokers). 30.6% of Māori smoke regularly¹ Māori 13.8% of non-Māori smoke regularly¹ Nationally, 32.7% of Māori and 12.6% of non-Māori smoke regularly¹

Income

Median income for Māori is several thousand dollars less

Nationally, median income for Māori is \$22,500 and for non-Māori is \$29,400 ^{1,2}

¹ Aged 15 years and over.

*Median income is generally a better measure than average income because income data is heavily skewed; a small number of people have very high incomes compared to the majority. Therefore median income gives a better idea of the majority of people's actual income.

*The New Zealand Deprivation Index uses census data on personal and household income, employment, qualifications, home ownership, single parent families, household crowding, and access to a car and the internet at home, to attribute a deprivation level to small geographical areas, on a scale from 1 (least deprived), to 10 (most deprived).

⁴Taking into account the number of bedrooms, couples, single adults and the age and gender of children.

⁵Aged 20 years and over.

Data source: Statistics New Zealand. The 'Not Elsewhere Included' ethnicity category (5.4%) was excluded from all calculations.

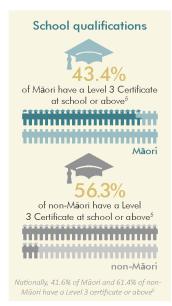

Unemployment

The Māori unemployment rate is more than two times that of non-Māori.

Nationally, the unemployment rate for Māori is 10.4% and for non-Māori is 4.0%1

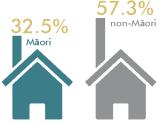

Household crowding

Living in a crowded house is proven to increase the risk of catching and spreading serious infectious diseases.⁴

Nationally, 20.0% of Māori and 7.9% of non-Māori live in crowded homes

Home ownership

Rates of home ownership have been falling in NZ since 1991. Māori are less likely to own, or partly own, their homes than non-Māori.¹

Nationally, 28.2% of Māori and 53.3% of non-Māori own, or partly own, their homes¹

Figure 2: The South Island Māori Population

2.3 Managing our Risk

GAINS THROUGH REGIONAL COLLABORATION

A 67 year old man with a diagnosis of Alzheimer's dementia and presenting with very resistive behaviour and his loved ones becoming scared of being around him, became calmer and happier and required less medication. This change followed the training in Walking in Another's Shoes programme, and staff subsequently developing a person centred plan and utilisation of skills learned to better meet his needs.

This is now a common story across the South Island.

The South Island DHBs have strengthened their ability to manage risk through their increased regional approach to health service planning and delivery. Enhanced relationships, greater collaboration and having regional systems and processes in place all help to prevent crises, and better manage the issues and challenges the South Island DHBs experience locally, and regionally.

The South Island DHBs are facing a number of fiscal and service delivery risks. The advantage of the South Island Alliance is the ability to share the discussions and develop options to support and collaborate to mitigate those risks.

To support the management of our risks, we are taking a greater regional approach to address workforce issues and sharing of information. We continue to build on the alignment of support services like human resources and procurement.

2.3.1 The Christchurch Earthquakes

Like the rest of the health sector, the Canterbury DHB faces the challenges of an ageing population, increasing demand for services, rising treatment costs and workforce shortages. However, unlike health providers in other regions, Canterbury is also contending with the consequences of the Canterbury earthquakes.

While the full long-term impacts are hard to determine, international research points to ongoing impacts for portions of the population for upwards of a decade following the disaster. There have been significant increases in demand for health services in Canterbury and worrying signs in terms of the mental health and wellbeing of the Canterbury population.

The need for Canterbury to maintain current service delivery levels remains critical to the whole of the South Island. While more than 90% of Canterbury's DHB activity is for its own population, over 7,000 people from other DHBs were discharged from Canterbury hospitals in 2014 and over 11,000 people had outpatient visits. In all, Canterbury DHB provides over \$100m worth of services to the populations of other DHBs, this includes delivering just over half of all surgical services provided in the South Island.

As the 'rebuild' phase gathers momentum, the Canterbury health system will continue to be significantly influenced by the following constraints:

- A sharp increase in demand for mental health services over the last three years (to March 2015) there
 has been a 65% increase in rural presentations and a 69% increase in child and youth presentations to
 community mental health services.
- There is considerable uncertainty about the influx of rebuild workers into Christchurch. Statistics NZ projections do not fully account for this population, however spikes in demand are evident. Between 2011/12 and 2014/15 the census population aged 25-29 increased by 9% but Emergency Department presentations for this age group increased by 37%. Over the same period, there has been a 370% increase in the number of people from overseas presenting to the Christchurch Hospital Emergency Department.
- The challenge of making the best use of \$384m of insurance proceeds and capital to manage \$518m of earthquake damage - the DHB is engaged in a significant remediation and repair programme that will continue for over a decade.

 While the rebuild and repair is underway, capacity is substantially reduced. Staff continue to work out of wards, laboratories and clinical spaces converted from offices, temporary buildings and port-a-coms. There will be several years of major disruption as the DHB shifts and relocates wards and services to make repairs. Over 86% of the beds (and patients) in Christchurch Hospital have already been moved at least once.

As the DHB deals with these new challenges and the focus moves to the rebuild, Canterbury is conscious of ensuring that the daily delivery of service is not compromised. Completed facilities remain several years off. The Canterbury DHB will require the ongoing support of the South Island DHBs to ensure their future viability and the ongoing delivery of care, not just to their own population, but to the population of the whole of the South Island.

GAINS THROUGH REGIONAL COLLABORATION

eReferrals, which is replacing paper-based referrals, is now being used by all South Island DHBs, after Southern DHB launched stage one of the programme in almost 30 general practices across the district. This also makes the programme one of the first key South Island Alliance Information Services solutions to become fully regional.

To date more than half a million referrals in the South Island have been made using the system. eReferrals is a combination of the Electronic Request Management System (ERMS) and Orion Health's Referral Management System (RMS).

3 SETTING OUR STRATEGIC DIRECTION

3.1 Strategic context

Although DHBs may differ in size, structure and approach, they all have a common goal: to improve the health

and wellbeing of their populations. Increasing demand for services, workforce shortages, rising costs and tighter financial constraints make this increasingly challenging.

International direction emphasises that a 'whole of system' approach is required to improve health outcomes and ensure the sustainability of high quality health services. This approach entails four major service shifts:

- Early intervention, targeted prevention, selfmanagement and more home-based care
- A connected system, integrated services and more services provided in community settings
- Regional collaboration, clusters and clinical networks, and more regional service provision
- Managed specialisation, with a shift to consolidate the number of tertiary centre/hubs.

GAINS THROUGH REGIONAL COLLABORATION Since she was born Isabelle has required IV antibiotic treatment. The first time she was admitted to the paediatric ward, for her parents, on top of the worry for their daughter, the admission meant juggling a family and work schedules around a daily marathon of commuting from a rural town to the city. The second time Isabelle needed IV antibiotic treatment she was discharged early and followed up by the communitybased infusion service. Under specialist community nursing guidance, Isabelle's parents and grandmother were all trained to manage her infusion at home. "They are great at the hospital, and we felt really safe and supported, but getting there every day is a nightmare. And because of the risk of infection Isabelle was pretty much confirmed to her hospital room – which for her was boring and frustrating". "Being at home is heaps better for her. I was surprised how easy it was to learn to do. Simple and much less stress. We know that next time we could manage at

home easily once the line is in, and with the community

nurses back up and support if we need it" reports Zoe,

Isabelle's mum.

Hospitals continue to be a key support and a setting for

highly specialised care, with the importance of timely access to care being paramount. However, the increased prevalence of long-term conditions and the ageing of our population means we need to move away from the traditional health model in order to support our population to maintain good health for longer.

Rather than wait for people to become acutely unwell or require institutionalised care, the whole of the health system needs to works in partnership to deliver accessible and effective services that support people to stay well and in their own homes for as long as possible.

3.2 National direction

At the highest level, DHBs are guided by the New Zealand Health Strategy, Disability Strategy, and Māori Health Strategy (He Korowai Oranga) and the New Zealand Public Health and Disability Act.

The ultimate high-level health system outcomes are that all New Zealanders lead longer, healthier and more independent lives and the health system is cost-effective and supports a productive economy.

DHBs are expected to contribute to meeting these system outcomes and the commitments of Government to

GAINS THROUGH REGIONAL COLLABORATION

The SI PICS programme has been endorsed by the National Health IT Board, the Health's Capital Investment Committee, and approved by Minister Ryall and Finance Minister Bill English.

provide 'better public services' and 'better, sooner, more convenient health services' by: increasing access to services; improving quality and patient safety; supporting the health of children; older people and those with mental illness; making the best use of information technology; and strengthening our health workforce.¹

Alongside these longer-term goals and commitments, the Minister of Health's annual 'Letter of Expectations' signals annual priorities for the health sector. The 2015/16 focus is on: clinical leadership; integration between primary and

 $^{^1 \,} For further \, detail \, refer to \, the \, Ministry \, of \, Health's \, Statement \, of \, Intent \, 2014-2018 \, available \, on \, their \, website \, -www.health.govt.nz. \, detail \, refer to \, the \, Ministry \, of \, Health's \, Statement \, of \, Intent \, 2014-2018 \, available \, on \, their \, website \, -www.health.govt.nz. \, detail \, refer to \, the \, Ministry \, of \, Health's \, Statement \, of \, Intent \, 2014-2018 \, available \, on \, their \, website \, -www.health.govt.nz. \, detail \, refer to \, the \, Ministry \, of \, Health's \, Statement \, of \, Intent \, 2014-2018 \, available \, on \, their \, website \, -www.health.govt.nz. \, detail \, refer to \, the \, Ministry \, of \, Health's \, Statement \, of \, Intent \, 2014-2018 \, available \, on \, their \, website \, -www.health.govt.nz. \, detail \, refer to \, the \, Ministry \, of \, Health's \, Statement \, of \, Ministry \,$

secondary care; tackling the key drivers of morbidity; delivery of national health targets; fiscal discipline and performance management.

The South Island Alliance is committed to playing its part in the delivery of longer-term health system outcomes and progress against national goals. Activity planned and prioritised in the coming year is in line with the priorities expressed by the Minister of Health.

3.3 Regional direction

In delivering its commitment to better public services and better, sooner, more convenient health services the Government also has clear expectations of increased regional collaboration and alignment between DHBs.

The Nelson Marlborough, Canterbury, West Coast, South Canterbury and Southern DHBs form the South Island Alliance - together providing services for 1,004,370 people or 23.7% of the total NZ population.²

While each DHB is individually responsible for the provision of services to its own population, we recognise that working regionally enables us to better address our shared challenges. Together we are committed to a sustainable South Island health system focused on keeping people well and providing equitable and timely access to safe, effective, high-quality services, as close to people's homes as possible.

The success of the Alliance relies on improving patient flow and the coordination of services across the South Island by: agreeing and aligning patient pathways, introducing more flexible workforce models and improving patient information systems to better connect services and the clinical teams involved in a patient's care

Closely aligned to the national direction, and operating under a 'Best for People, Best for System' framework, the shared outcomes goals of the South Island Alliance are:

- Improved health and equity for all populations.
- Improved quality, safety and experience of care.
- Best value from public health system resources.

A set of high level outcomes to sit alongside the 'Best for People, Best for System' framework and enable evaluation of regional activity has been agreed. These are:

- Improved environment to support health and wellbeing
- People have increased access to planned care
- People wait less
- People have delayed/avoided burden of long term conditions
- People have few and shorter episodes in care facilities
- No wasted resource
- People are protected from harm or needless death
- People die with dignity

move through their weight-loss journey.
A testament to the way weight-loss surgery can change patient's outlook on life was received recently from a patient who described how her quality of life and health had improved as she worked through the bariatric surgery pathway. The patient wished to pass on her thanks to the team involved in her care, and said she would always 'use her new stomach appropriately and gratefully' – it's great to hear about the end of result of some of our regional work.

GAINS THROUGH REGIONAL COLLABORATION

The South Island Bariatric Surgery Service is

now well underway with clinicians and patients on board with the regional service.

The regional service is resulting in a fairer and

more transparent process for patients as they

² 2015/16 Population Based Funding Projection provided to the Ministry of Health by Stats NZ, based off the 2013 Census

The framework has been undated to show the outcomes as per Figure 3.

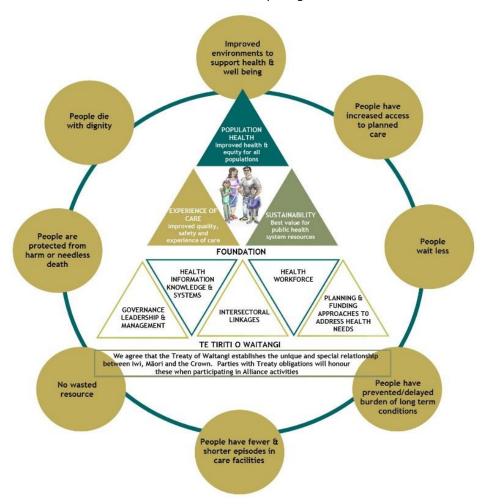

Figure 3: 'Best for People, Best for System' Outcomes Framework

The South Island Health Services Plan highlights the agreed regional activity to be implemented through our seven priority service areas: Cancer, Child Health, Health of Older People, Mental Health and Addiction, Information Services, Support Services and Quality and Safety Service Level Alliances, and our key regional activities.

Regional activity in the coming year will focus on: cardiac services, elective surgery, palliative care, public health, stroke and major trauma services. Workforce planning, through the South Island Workforce Development Hub and regional asset planning, will contribute to improved delivery in all service areas.

All South Island DHBs are involved in the service level alliances and work streams and lead at least one priority area. Each DHB's commitment in terms of the regional direction is outlined in

their Annual Plans.

3.4 Local direction

To sustainably cope with the increasing demand for services, DHBs must design pathways that influence the flow of people—delivering care in the most appropriate setting and reducing demand by supporting people to stay well and maximise their independence.

DHBs will work with their stakeholders to effectively coordinate care for the population and to influence demand. Ultimately, this will assist the DHBs to

GAINS THROUGH REGIONAL COLLABORATION

"By working as an alliance we are putting our heads together, sharing our experiences, gathering insight and learning from each other's efforts in ways that can make a big difference in terms of supporting the long term goals of South Island DHBs to improve patient safety."

achieve their desired outcomes that people will receive the care and support they need, when they need it, in the most appropriate place and manner.

4 IMPROVING HEALTH OUTCOMES FOR OUR POPULATION

4.1 What are we trying to achieve?

DHBs are expected to deliver against the national health sector outcomes: "All New Zealanders lead longer, healthier and more independent lives" and 'The health system is cost effective and supports a productive economy' and to meet Government commitments to deliver 'better, sooner, more convenient health services'.

As part of this accountability DHBs need to demonstrate whether they are succeeding in meeting those commitments and improving the health and wellbeing of their populations. There is no single measure that can demonstrate the impact of the work DHBs do, so a mix of population health and service access indicators are used to demonstrate improvements in the health status of the population and the effectiveness of the health system.

In developing its regional strategic framework, the South Island Alliance has identified three strategic goals and eight collective outcomes and an associated set of indicators by which individual DHB performance will contribute to regional success and demonstrate whether they are making a positive change in the health of their populations. As these are long-term outcome indicators (5-10 years in the life of the health system) the aim is for a measurable change in health status over time, rather than a fixed target. An associated set of medium-term (3-5 years) indicators of performance has also been identified. Because change will be evident over a shorter period of time, these impact measures have been identified as the 'headline' or 'main' measures of performance over the next 3–5 years. These medium term impact measures are a collection of regional measures and locally set targets. The locally set targets are outlined in the each DHB Annual Plan.

GAINS THROUGH REGIONAL **COLLABORATION** eReferrals continues to receive positive feedback, especially with respect to the noticeable reduction in administration time once practices start using ERMS as illustrated by the feedback received below: "Traditionally at least six of our twelve GP's have dictated letters and had our administrator type them. Since moving to ERMS, a large percentage of this work is now being done by the GP's themselves. Even though we had templates set up for letters before, there is a real shift to using ERMS and doing their own typing. I believe that they can see the benefit of seeing the referral submitted and having an acknowledgement of receipt straight away. This is the case for even our most technophobe doctors!!! So all in all we are very happy with ERMS as it has cut down on a lot of duplication of work with the GP's often cutting and pasting directly from their

Judy Gilmour, Practice Manager, Stoke Medical Centre

consult notes instead of dictating."

4.2 South Island Intervention Logic Diagram

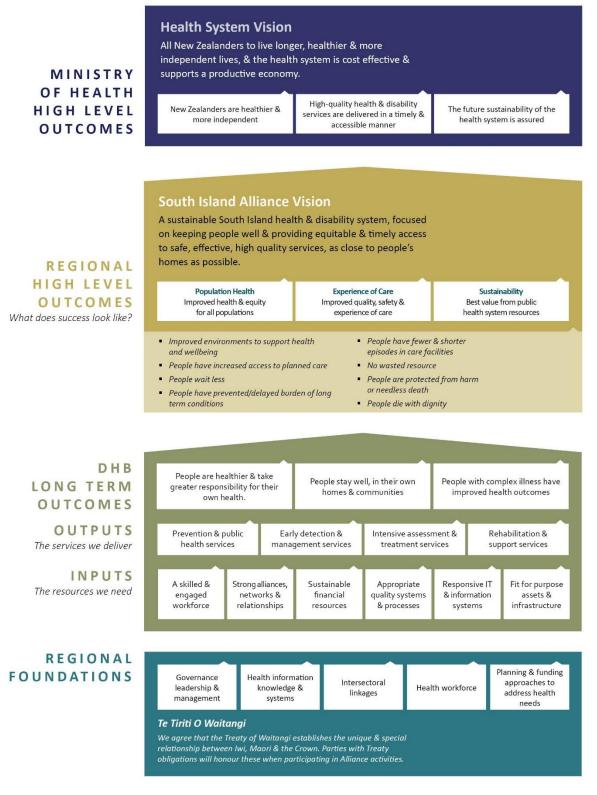

Figure 4: South Island Intervention Logic Diagram

4.3 Outcome 1: Improved environments to support health & well being

Why is this outcome a priority?

Our health system is complex and continues to experience multiple challenges. Current challenges include: increasing patient complexity, increasing technology, a call for increased efficiency, transparency and accountability from society, changes in social demographics and workforce shortages. To achieve integrated and coordinated care we need to support an environment that creates connectivity, alignment and collaboration within and between all parts of the health system and other related sectors.

The World Health Organisation (WHO) estimates more than 70% of all health funding is spent on long-term conditions. As our population ages the incidence and burden of long term conditions increases. Long-term conditions are also more prevalent amongst Māori and Pacific Islanders and are closely associated with significant disparities in health outcomes across population groups.

Tobacco smoking, inactivity, poor nutrition and rising obesity rates are major and common contributors to a number of the most prevalent long-term conditions. These are avoidable risk factors, preventable through a supportive environment, improved awareness and personal responsibility for health and wellbeing. Supporting people to make healthy choices will enable our population to attain a higher quality of life and to avoid, delay or reduce the impact of long-term conditions.

GAINS THROUGH REGIONAL COLLABORATION

A community based infusion service has meant that unwell children requiring intravenous medications are able to be managed in their home or at a community based clinic, thereby, avoiding an admission to the paediatric service.

This example of delivery an infusion services in the child's home or as close to the child's home as possible has resulted in a decrease in unavoidable hospital admissions and most importantly greatly improved patient and family satisfaction and engagement in ongoing treatment and care. The model is being explored across SI DHBs for the management of particular chronic conditions such as cystic fibrosis and bronchiectasis.

4.4 Outcome 2: People have increased access to planned care

Why is this outcome a priority?

GAINS THROUGH REGIONAL COLLABORATION

Supported by the Information Services,
Service Level Alliance e-Prosafe has now been rolled out in four of the five DHBs in South Island. The database supports improved protection for the children of the South Island by providing risk assessments and interventions to prevent child abuse and family violence cases. It also allows for the sharing of relevant clinical information across the South Island DHBs in a timely and safe manner.

Improving access to planned rather than emergency care is important for patients. By providing planned access to services people suffering from health conditions can get better, and timelier, care; allowing them to regain their quality of life sooner. This may also allow people to resume or maintain their productive contribution to the community.

In personalised care planning, clinicians and patients work together using a collaborative process of shared decision-making to agree goals, identify support needs, develop and implement action plans, and monitor progress. This is a continuous process, not a one-off event.

4.5 Outcome 3: People wait less

Why is this outcome a priority?

We have a commitment to ensure that patients receive timely access to the most appropriate care in the most appropriate place. It's about getting the greatest value for our people from the system, allowing evidence to inform how our scarce health care dollars are best invested and ensuring people receive the care they need as close to home as possible.

SOUTH ISLAND REGIONAL HEALTH SERVICES PLAN 2015-2018

Delayed access to medical care may subject patients to increased pain, suffering, and mental anguish. Waiting for health care can also have broader economic consequences such as increased absenteeism, reduced productivity, and reduced ability to work for the individual waiting as well as for family members and friends who are concerned for them or may be called to assist them with activities of daily living. Waiting may also lead to poorer outcomes from care, if not a requirement for more complex treatments, as a result of deterioration in the patients' condition while they wait for treatment. Such deterioration may also result in permanent disability.

We also must value people's time as they move through the health system. By looking at the how, where, when and who of care provision and looking at it from the patient's perspective we remove the barriers and make the system more integrated. This focus improves quality and efficiencies supporting our 'best for people, best for system' approach.

4.6 Outcome 4: People have prevented/delayed burden of long term conditions

GAINS THROUGH REGIONAL COLLABORATION

The second nursing Gerontology
Acceleration Programme has
commenced with 10 participants,
there were six participants in the first
programme. This training targets
mid-career nurses to grow clinical
leadership skills for the Aged
Residential Care sector.

Why is this outcome a priority?

Chronic diseases are now the most common cause of death and disability. These people tend to be high users of health care resources, and social care. The prevalence of long-term conditions rises with age with many older people have more than one chronic condition.

It is now widely recognised that the care and support needed to live with a long-term condition requires a radical re-design of services, allowing patients to drive the care planning process. There is growing evidence that engaging patients in decisions about their care and providing supported

self-management improves the quality of life for those with long term conditions, alongside co-ordinated care, prevention, early diagnosis and intervention and emotional, psychological and practical support.

The prevalence of long term disease is placing an increasing burden on patients and their carers, and on the whole health system and its service providers. For patients improving service coordination and assistance in moving more seamlessly from one care setting to another (including between health services and sectors) can lead to better continuity of care, resulting in potentially avoidable negative health outcomes such as hospitalisation.

By intervening early, and with improved coordination and proactive provision of care, our people, families and whānau with complex conditions have improved health outcomes. This supports our people to stay well and maintain their functional independence

4.7 Outcome 5: People have fewer & shorter episodes in care facilities

Why is this outcome a priority?

Advancements in medical and health technology have enabled the population to live longer, however more people are living with co-morbidities and needing complex care interventions. We know that investing in community services and the community workforce will help to deliver positive health outcomes and free hospitals to provide more acute and specialised care. By reducing the length of stay in health care facilities we release capacity in the system, including beds and staff time, which helps to minimise waiting times, maximise productivity and improve the patient experience.

This approach also reduces average hospital length of stay, increases patient choice and satisfaction, improves health outcomes, reduces unscheduled health care use, embraces prevention and health promotion models, delivers care closer to people's homes and saves money.

4.8 Outcome 6: No wasted resource

Why is this outcome a priority?

GAINS THROUGH REGIONAL COLLABORATION

\$14.62 million of annual savings accumulated. (1 July 2013-30 June 2014) We have a commitment to ensure that patients receive timely access to the most appropriate care in the most appropriate place. It's about getting the greatest value for our people from the system, allowing evidence to inform how our scarce health care dollars are best invested and ensuring people receive the care they need as close to home as possible.

As our population ages, so does our workforce, so we need to enable health professionals to work at top of their scope of practice with the support of an appropriately trained unregulated workforce, building an innovative and flexible workforce that will meet the needs of the emerging models of health care.

4.9 Outcome 7: People are protected harm or needless death

Why is this outcome a priority?

Our focus on 'best for people, best for system' places an emphasis on the system of care delivery that; prevents errors; learns from the errors that do occur; and is built on a culture of safety that involves health care professionals, organisations, and patients.

Quality improvement in service delivery, systems and processes improve patient safety, reduce the number of events causing injury or harm and improve health outcomes. Adverse events and delays in treatment, as well as causing harm to patients, drive unnecessary costs and redirect resources away from other services. Appropriate and quality service provision will reduce readmission rates and better support people to recover from complex illness and/or maximise their quality of life.

GAINS THROUGH REGIONAL COLLABORATION

"Safety 1st is a real win-win for staff and patients in terms of making our health settings safer and improving the quality of care we provide every day. We know that in every health setting around the world adverse events and incidents do happen, and it is our job to learn from them and to reduce the chance of them happening again. This system will make it easier for us to do that. Overall it's about supporting an open and transparent process of reporting and information sharing within the health sector, which we can all benefit and learn from.

Mary Gordon Chair (Q&SSLA)

4.10 Outcome 8: People die with dignity

Why is this outcome a priority?

GAINS THROUGH REGIONAL COLLABORATION

We are supporting people to have the conversation and document their Advance Care Plans through training of staff. In 2013-14 60 participants completed Level 2 Advance Care Planning training At the end of life our people should be treated with respect and be listened to and be taken seriously. This means different things for different people and may mean death without suffering and pain and death coming calmly. It may be a death with limited medical intervention without unnecessary examinations and treatments. Others may believe death should come with a sense of security, not being left alone while dying. Others may want to die in peace and in a harmonic and calm way.

5 REGIONAL GOVERNANCE, LEADERSHIP AND DECISION MAKING

5.1 The Role and Scope of the South Island Region

"Our purpose is to lead and guide our Alliance as it seeks to improve health outcomes for our populations. We aim to provide increasingly integrated and coordinated health services through clinically-led service development, and its implementation, within a 'best for people, best for system' framework."

5.1.1 Regional governance and leadership

In order to advance the implementation of regional service planning and delivery, in 2011 the South Island DHBs established an alliance framework. This approach continues to facilitate the DHBs in working together to jointly solve problems by sharing knowledge and resources with a focus on achieving the best outcomes for the region's population. The alliance framework has been successful in supporting the DHBs to achieve in both the enabler and clinical service areas and has been recognised as a successful model at a national level and by the other regions.

5.2 Our governance structure

The South Island DHB Alliance focuses South Island DHB collaboration through:

- An Alliance Board (the five South Island DHB Board Chairs) that sets the strategic focus, oversees, governs, and monitors overall performance of the Alliance.
- An Alliance Leadership Team (the South Island DHB CEOs) that prioritises activity, allocates resources (including funding and support) and monitors deliverables.
- A Regional Capital Committee (SIA Board and Alliance Leadership Team) that reviews capital investment proposals in accordance with the agreed regional service strategy and planning.
- A Strategic Planning and Integration Team (SPaIT) (Clinical and Management Leaders) that supports an integrated approach, linking the Service Level Alliances and workstreams to the South Island vision, identifying gaps and recognising national, regional and district priorities.
- The South Island Planning and Funding Network (SIP&FN) on our alliance achievements, supports regional alliance issues and collaborates on non-alliance issues, including strategic planning, meeting of government priorities, statutory requirements, and provides whole of population funding advice.

5.3 Service Level Alliances and Workstreams

South Island regional activity involves a wide representation of the key stakeholders including health professionals, managers, funders, health care providers and consumers. The teams are clinically-led with the exception of the Support Services Service Level Alliance. A Chief Executive or Senior Executive from one of the DHBs, sponsors each Service Level Alliances and Workstream to support the team and where necessary help to

South Island Alliance Charter Principles

- We will support clinical leadership, and in particular clinically-led service development;
- We will conduct ourselves with honesty and integrity, and develop a high degree of trust;
- We will promote an environment of high quality, performance and accountability, and low bureaucracy;
- We will strive to resolve disagreements co-operatively, and wherever possible achieve consensus decisions;
- We will adopt a people-centred, whole-of-system approach and make decisions on a Best for System basis;
- We will seek to make the best use of finite resources in planning health services to achieve improved health outcomes for our populations;
- We will balance a focus on the highest priority needs in our communities, while ensuring appropriate care across all our rural and urban populations;
- We will adopt and foster an open and transparent approach to sharing information; and
- We will actively monitor and report on our alliance achievements,

manage risks. Sponsors also provide a point of escalation for the resolution of issues if one of the agreed programmes or projects vary from planned time, cost or scope. The SLA/Workstream is responsible for overseeing the agreed programme of work, providing overarching programme and project governance. The work is supported by the staff employed by the South Island Alliance Programme Office

5.4 Decision making

The South Island Alliance approach to decision making and the process for resolving disputes is detailed in the South Island collective decision making principles (Appendix 2).

The foundation of the South Island Alliance is a commitment to act in good faith to reach consensus decisions on the basis of 'best for people, best for system'.

It is acknowledged that there may be areas within the scope of the activities of the Alliance where a particular DHB either may wish to, fully or partially, be excluded from the Alliance activities. It is agreed and written into the Charter that each Board will have this option at the time of commencing, however, once agreed, the Board will be bound to operate within the scope and decision making criteria agreed. Any DHB intending to exercise this right will do so in good faith and will consult the other South Island DHBs before exercising this right.

GAINS THROUGH REGIONAL COLLABORATION

The ePrescribing and Administration implementation is progressing well within Southern DHB. This project is part of the South Island Alliance's eMedicines Programme. ePrescribing and Administration enables doctors to electronically chart patients' medications, removing the risk of handwriting being misinterpreted. It also allows nursing staff to administer and record medications electronically, resulting in fewer errors and a reduction in harm to patients.

5.4.1 Escalation Pathway

The Alliance operates under the following escalation pathway:

- Operational group (including Service Level Alliance/Workstreams) to Alliance Leadership Team (South Island DHB CEOs);
- Alliance Leadership (South Island DHB CEOs) to Alliance Board (South Island DHB Chairs); and
- Alliance Board (South Island DHB Chairs) to Shareholding Ministers.

5.5 Regional Funding and Approval Model

All regional activity that required project, or capital funding requires support from the South Island General Managers Planning and Funding or South Island Chief Financial Officers (as appropriate). A recommendation is then made to the South Island Alliance Leadership Team or Regional Capital Committee for approval. A simple prioritisation process has been used to date based on Impact and Feasibility. A more sophisticated model is currently in development and will be consulted on with the relevant regional groups before presentation to the South Island Alliance Leadership Team and Board for endorsement.

6 SERVICE PERFORMANCE PRIORITIES 2015-2018

What do we need to: Keep people well in the community? Ensure early detection and early intervention? Support people to self-manage in a community setting, avoid unnecessary hospital admissions and slow the progression of their condition? Ensure that when people require complex interventions, they are available at the right time and to a high quality standard? Provide appropriate and restorative support services so that people can regain their functional independence after injury or illness, and avoid further complications?

The South Island DHBs are involved in collaborative activity across a large number of regional and sub-regional

service areas. The areas identified in this section are those that have been given national and regional priority. In addition to these priority areas, regional planning continues for neurosurgery, primary care emergency planning and coordination. Māori health approaches have been incorporated into the 2015-18 priority area workplans (Appendix 3).

Each priority area—whether supported by regional Service Level Alliance, Workstream or group—is clinically led, or, as for the Support Services Service Level Alliance, has clinicians involved in the teams and in all key decision making approaches. Members of the Service Level Alliances and other working groups come from each of the DHBs and provide breadth of expertise and ownership for development initiatives. The South Island Alliance Programme Office and a regional communication strategy support the activities across the South Island.

GAINS THROUGH REGIONAL COLLABORATION

Replacing each district health board's patient information system with a single streamlined regional system will provide healthcare staff with more accurate information, and allow them to spend less time on administration and more time on caring for patients. The new system will also be more timely and cost-efficient than the patient information systems it replaces. Nelson Marlborough DHB and Canterbury DHB have both completed implementation business cases for the deployment of SI PICS at their respective DHBs — these implementation cases have been approved by their Board.

6.1 Improving Health Systems Outcomes

"Health service integration is bringing together common functions within and between organisations to solve common problems, developing commitment to a shared vision and goals and using common technologies and resources to achieve these goals." World Health Organisation, Technical Brief No.1, May 2008

GAINS THROUGH REGIONAL COLLABORATION

Staff working in all health care settings in the South Island are improving the lives of people with Dementia by reinforcing a person centred approach and providing information to support earlier diagnosis. The dementia framework is being progressed in the South Island to deliver increased integration of older people's health and support services, to ensure seamless pathways of care for older people who live in the South Island. The Cognitive Impairment Pathway is the most commonly viewed site on the HealthPathways website with 4293 hits in the twelve months to 2

The South Island region aims to improve the systems within which health services are provided by the individual South Island DHBs.

Each Service Level Alliance and regional activity work plan includes actions, measurable deliverables and outcomes specific to the service area. The Service Level Alliances and other regional activities aim to achieve the following outcomes:

- that the health and disability system and services are trusted and can be used with confidence; and
- that people receive better health and disability services.

The Service Level Alliances/Workstreams work and regional

work plan addresses the eight high level outcomes for the South Island region:

- Improved environment to support health and wellbeing
- People have increased access to planned care
- People wait less

- People have delayed/avoided burden of long term conditions
- People have few and shorter episodes in care facilities
- No wasted resource
- People are protected from harm or needless death
- People die with dignity

6.2 Overview of how the activity of the South Island Alliance supports the framework

The following are examples of the work planned for 2015/16 and the outcomes the activity will support. This is a work in progress but supports us understanding how our work relates to the outcomes we are working towards.

6.2.1 Improved environments to support health and wellbeing

Public Health

South Island DHBs' Alcohol Position Statement and Alcohol Harm Reduction Strategies

- DHB Alcohol Harm Reduction Strategy promotion.
- Coordinated health promotion and health protection activity demonstrated South Island-wide.

Sustainability

- All South Island DHBs become members of the Green and Healthy Hospital Initiative (GGHI).
- Promotion of consistent environmental / sustainability monitoring systems.3

Health determinants

- Support DHB efforts to address housing where it impacts health outcomes, including multistakeholder and intersectoral engagement.
- Review opportunities for a coordinated South Island response to obesity and obesogenic environments.

Child Health

South Island Children's' Action Plan

 Agree South Island regional interventions to better manage safety, reduce family violence and childhood poverty.

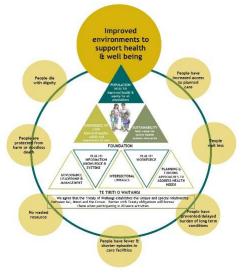

Programmes to Reduce Youth Risk Taking

In partnership with Health Promotion Agency, South Island Public Health Partnership and the Mental Health
 & Addiction Service Level Alliance implement findings of South Island Emergency Department scoping exercise.

Information Services

Health Connect South

- Development enhancements for the regional Health Connect South solution.
- Complete Southern DHB's Health Connect South implementation.

 $^{^{3}\,}$ Note, public health can seek to influence here but the outcome is highly dependent on wider DHB commitment and support.

- Complete Nelson Marlborough DHB's Health Connect South implementation.
- · Fully implement eDischarge for all South Island DHBs.

South Island Patient Information Care System

- Supporting the first implementations of SI PICS and define the Second Phase of the solution.
- Go-live Phase I and prepare for implementation into the balance of Canterbury DHB sites.
- Project go-live for Nelson Marlborough DHB.
- Prepare for SI PICS Implementation for West Coast DHB.

Workforce Development Hub

eLearning

- Implement a common eLearning platform for all DHB staff.
- Lippincott on-line evidenced based clinical procedure manual is introduced to all South Island DHBs.

Regional Coordination and Development of Interprofessional Learning

• Increased opportunities for interprofessional learning in a clinical environment.

Support all South Island HWNZ Funded Trainees to Make Appropriate Career Choices

 All HWNZ funded trainees have access to career guidance and a career plan aligned to individual aspirations and future workforce needs.

Vulnerable Workforces

- South Island vulnerable workforces are identified and plans established to mitigate these.
- Development of the primary and secondary care health workforce to support a shift in care that is more community based.
- Increase the participation of Māori & Pacific people in the clinical workforce.

Health of Older People

Dementia Services

- Improved services for people with dementia by implementing 'the New Zealand Framework for Dementia Care' in the South Island.
- Develop appropriate dementia education/ training materials for South Island primary health care person centred care.

Stroke

Workforce Planning and Development

- Named stroke specialist/s within each inter-disciplinary team.
- Named lead stroke clinician and/or nurse in each DHB with specific remit to develop and improve Stroke Services for that DHB.

Cancer

People Get Timely Access across the Whole Cancer Pathway

• Supporting the South Island-wide review of services against national tumour standards, with a focus on supportive care, palliative care and equity.

6.2.2 People have increased access to planned care

Cardiac

Improved Outcomes for People with Suspected Acute Coronary Syndrome

- Standardised intervention rates for ACS patients.
- Support access to angiography for high risk populations groups.

Electives

Improve Access to elective services

Improve equity of access to selected elective services.

Stroke

Ensure Rapid Access to Treatment for Potential Thrombolysis Candidates

- Each South Island DHB has a system to rapidly confirm a diagnosis of stroke and identify patients who may benefit from thrombolysis therapy.
- Support all South Island DHBs to implement stroke thrombolysis pathways.

6.2.3 People wait less

Cardiac

Improved Outcomes for People with Suspected Acute Coronary Syndrome

Standardised intervention rates for ACS patients.

Cancer

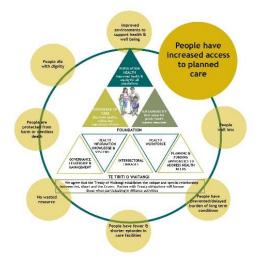

People Get Timely Services across the Whole Cancer Pathway

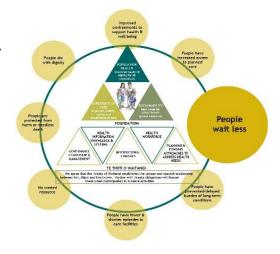

Achieving the Faster Cancer Treatment Health Target.

Information Services

Emergency Department Whiteboard

Provide a regional solution to support visibility of ED activity.

People have prevented/delayed burden of long term conditions

Child Health

Interventions to Reduce Hospital Admissions

- Implement a South Island Health Pathway for Dermatitis and Eczema.
- Increase GP training on Dermatitis and Eczema.

A Regional Integrated Obesity Management Programme

- Develop a regional integrated obesity management programme.
- Enhance collaboration with child dental health services.

Information Services

Patient Portal

Implement a Patient Portal that helps patients be involved in their care and supports clear communication resulting in a better patient experience and improved patient outcomes.

Health of Older People

Dementia Services

- A Cognitive Impairment Pathway (CIP) will be promoted for adoption across all South Island DHBs.
- WiAS programme continues to be expanded in each South Island DHB reaching a wider range of staff working with people with dementia.

Restorative Model of Care

A Web Based Toolkit that is evidence based and guides service providers to deliver restorative, person centred care.

Stroke

Rapid Access to treatment for Potential Thrombolysis Candidates

- Each South Island DHB has a system to rapidly confirm a diagnosis of stroke and identify patients who may benefit from thrombolysis therapy and this system is implemented in each South Island DHB.
- Implement stroke thrombolysis pathways.
- Optimise outcomes for all patients with stroke in rural and urban locations.

Integrated Stroke Rehabilitation Services

Community stroke rehabilitation is available to aid adjustment and minimise complications.

6.2.5 People have fewer and shorter episodes in care facilities

Cardiac

Heart Failure

 Implement agreed protocols to ensure optimal management of patients with heart failure.

Major Trauma

Improve the Pathway for Patients with Major Trauma

 Implement a planned and consistent approach to the provision of Major Trauma services across the South Island.

Health of Older People

Comprehensive Clinical Assessment (interRAI)

- Comprehensive Clinical Assessment using a standardised assessment tool (interRAI) facilitating a system wide approach to common assessment.
- Monitor population and service data trend to influence changes in service through advocacy.

Reduce Hospital Admissions

- A South Island Diabetes Working Group established to improve systems across South Island for young people with Diabetes in particular Type 1.
- Strengthen models of care within primary care right place right time right service.

Mental Health and Addiction

Access to Youth Forensic Services

Development of community youth forensic services.

Mental Health and Intellectual Disability Dual Diagnosis

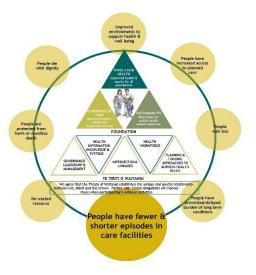

• Identify options to support consumers with Mental Health and Intellectual Disability Dual Diagnosis who are inappropriately placed.

Forensic Services

Improved adult forensic service capacity & responsiveness.

Access to Mental Health Services

• Monitor and support ongoing improvements in the regional provision of eating disorder services, mothers and babies' services, and alcohol and other drug services.

6.2.6 No wasted resource

Support Services

Procurement and Savings

- Aggregate procurement requirements and improve purchasing power.
- Savings achieved enabling redeployment of funds to appropriate services.
- Increased rationalisation and standardisation of products and services.

Cardiac

ECG Storage and Sharing

A common regional method of storing and sharing ECGs.

Workforce Development Hub

eLearning

- Nursing Community of Practice have identified and prioritised a regional suite of eLearning packages.
- Mental Health Core Education Group have identified and prioritised a regional suite of eLearning packages.

Clinical Simulation

Clinical simulation is accessible to staff working in the smaller centres and rural areas of the South Island.
 A coordinated clinical simulation network for the South Island.

6.2.7 People are protected from harm or needless death

Child Health

Improve Sudden and Unexpected Death in Infants (SUDI) Rates

 Implement the findings of the audit of the SI sudden death in infancy policy.

Pathway to improve Health Outcomes for Māori and Pacific Island Youth with Mental Health Conditions

 Evaluation and implementation of an e tool that supports youth, in particular Māori and Pacific Island, to improve health outcomes.

People are protected from harm or needless death **CONTROL OF THE TENENT OF THE TENEN

Quality and Safety

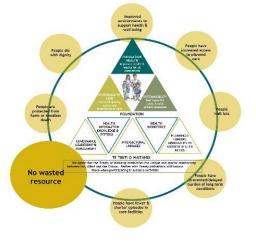

Supporting DHBs to Make a Positive Contribution to Patient Safety and Quality of Care

- Monitor and recommend options for reducing perioperative harm.
- Supporting consumer involvement in South Island Alliance activity.

Information Services

eMedicines

- SDHB, CDHB, SCDHB ePrescribing and Administration project complete.
- WCDHB, NMDHB ePrescribing and Administration implementation.

- Complete the implementation of eMedicines Reconciliation within Canterbury DHB and commence implementation planning for remaining South Island DHBs.
- Complete the regional implementation by implementing ePharmacy Management within South Canterbury, West Coast, Southern and Nelson Marlborough DHBs.

Health Connect South

- Complete Southern DHB's Health Connect South implementation.
- Complete Nelson Marlborough DHB's Health Connect South implementation.
- Fully implement of eDischarge for all South Island DHBs.

South Island Patient Information Care System (PICS)

- Supporting the first implementations of South Island PICS and define the Second Phase of the solution.
- Go-live Phase I and prepare for implementation into the balance of Canterbury DHB sites.
- Project go-live for Nelson Marlborough DHB.
- Prepare WCDHB for SI PICS Implementation.

Stroke

Ensure Rapid Access to Treatment for Potential Thrombolysis Candidates

- Each South Island DHB has a system to rapidly confirm a diagnosis of stroke and identify patients who may benefit from thrombolysis therapy.
- Support all South Island DHBs to implement stroke thrombolysis pathways.

Health of Older People

Falls Prevention and Fracture Liaison Service

- Development of an evidence based Fracture Liaison Service.
- Agree a South Island Policy on Community Based Falls Prevention Programmes based on the evidence of the Otago Exercise Programme.

Workforce & Development Hub

Clinical Simulation

Clinical simulation is accessible to staff working in the smaller centres and rural areas of the South Island.
 A coordinated clinical simulation network for the South Island.

Mental Health and Addiction

Seclusion and Restraint

Collaboration on seclusion and restraint across SI DHBs with a specific focus on Māori.

6.2.8 People die with dignity

Palliative Care

Equitable Access to an Integrated Palliative Care System

- All people who are dying and their family /whānau have access to an equitable and quality palliative care service.
- Primary care provided with expertise and resources to enable patients to die in their preferred place of care.
- Consumer participation and decision making about palliative and end of life care.

Health of Older People

Advance Care Planning (ACP)

- Develop ACP systems and processes to embed ACP as standard practice for those who will benefit.
- ACPs are incorporated into the regional IS system/plan.
- South Island DHB are supported to participate in "Conversations that Count" (CtC) awareness raising day April 2015.

6.3 Clinical Service Developments

6.3.1 Cardiac Intervention Services

The South Island has some challenges in ensuring a sustainable cardiac surgery service, but rather than focusing on one component of the cardiac service we recognise the need for a South Island approach for patients who require cardiac intervention (cardiac surgery or interventional cardiology). This process is critical to ensure that risks to the current wider South Island services are understood. The scope of this work is to agree a clinical pathway for patients who require cardiac intervention. This will include:

- an agreed approach to decision making, management, co-ordination and prioritisation
- be based on best practice
- support patients with a similar level of need to receive comparable access to services, regardless of where they live

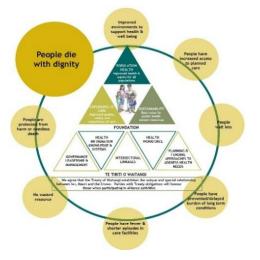

Once the Model of Care has been agreed then further work will be required to determine how/where these services are delivered, recognising the need to support sustainable services for the South Island population and the potential impact on the other cardiac services across the country.

6.3.2 Hepatitis C

The South Island DHBs recognise the need to a collaborative and focused approach to identify and treat those at risk of or with Hepatitis C. We will work together to understand the services currently provided across the South Island and to develop a 2015 -16 plan that supports a sustainable service for the South Island population including oversight of the services, support to clinicians. The plan will consider any impact on secondary services, how Fibroscanning is provided and ensure that a clinical pathway is developed and adopted.

6.3.3 Laboratory Services

In 2014, the General Managers Planning and Funding of the Southern, South Canterbury and Nelson Marlborough District Health Boards recognised that their laboratory contracts were due to expire in 2016. It was agreed that a sub-regional laboratory strategy be developed for the purpose of establishing the service needs for community and hospital diagnostic laboratory provision and to inform future contracting options.

The objectives of the laboratory strategy are to:

- Inform DHB Boards about future direction of laboratory services.
- Identify and recommend options to deliver on the triple aim associated with taking a sub-regional approach to the provision of laboratory services.
- Maintain and or where indicated improve the quality medical laboratory diagnostic services.

The scope for the project as agreed by the Southern, Nelson Marlborough and South Canterbury DHB boards includes the preparation and drafting of a strategic paper outlining options for the future delivery of medical diagnostic laboratory services and does not include the management and development of future contractual arrangements.

A steering group has been established to guide the project. In developing the paper the group will consider:

- The current state of service delivery and issues across the South Island and within the three DHB regions,
- Issues across community and hospital services,
- Integration with regional information systems including patient records and pathway of care,
- Current utilisation and future service demand,
- Clinician/ referrer needs and levels of service now and in the future,
- Future technology trends, including digital pathology and point of care testing (POCT),
- · Demand management, quality use of tests and cost containment,
- Patient access, including geographic aspects and out of hours,
- Physical infrastructure, including geographic aspects.

Appendix 1 – Minister Letter of Expectation 2015

Office of Hon Dr Jonathan Coleman

Minister of Health
Minister for Sport and Recreation

Member of Parliament for Northcote

17 DEC 2014

Chair

Dear Chair

Letter of expectations for DHBs and subsidiary entities 2015/16

Thank you for the continued contribution you and your staff are making to a better public health service. It is important that we drive a team approach across the system.

While recognising these are tight economic times, the Government is committed to improving the health of New Zealanders and will continue to invest in key health services. Investment in our public health services has risen from a budget of \$11.8 billion in 2008/09 to \$15.6 billion in 2014/15. Health is the only portfolio with this sort of increase, which demonstrates the Government's on-going commitment to protecting and growing our public health services.

Fiscal Discipline/Management of the Health Portfolio

As I have discussed with you previously, DHBs need to budget and operate within allocated funding and must have detailed plans to improve year-on-year financial performance. This includes seeking efficiency gains and improvements in purchasing, productivity and quality aspects of DHBs' operation and service delivery. You and your Board must monitor and hold your Chief Executive accountable against these expectations as keeping to budget allows investment into new and more health initiatives.

Improvements through national, regional and sub-regional initiatives must continue to be a key focus for all DHBs. I recognise that DHBs want to have a greater role in the process of making back office savings to reinvest into frontline services, and want greater control of the implementation phase of the four health shared service business cases. It is essential that these business cases are implemented swiftly and savings achieved. The current transition process in place to shift responsibility for implementation of the business cases takes these considerations on board.

Leadership

Strong clinical leadership and engagement should be embedded in DHBs and utilised in all aspects of DHBs' core business eg budgeting and service design. Clinically driven service changes are encouraged where these make sense for patients and encourage positive

Private Bag 18041, Parliament Buildings, Wellington 6160, New Zealand. Telephone 64 4 817 6818 Facsimile 64 4 817 6518

system changes. DHBs are expected to include clear detail in their annual plans for 2015/16 that shows how they will foster clinical leadership.

DHB governance, senior management and clinical leaders need to work together in order to ensure we are heading in the same direction. As agents of the Crown you and your Board must assure yourselves that you have in place the appropriate clinical and executive leadership to deliver on the Government's objectives. I expect you to spend time talking with clinical leaders and fostering, encouraging and supporting clinically-led decision making.

Integration between Primary and Secondary Care

Integrating primary care with other parts of the health service is vital for better management of long-term conditions, mental health, an aging population and patients in general. The pathways to achieve better co-ordinated health and social services need to be developed and supported by clinical leaders in both community and hospital settings. I expect DHBs to move services closer to home in 2015/16, and DHBs need to have clear evidence of how they plan to do this. The key to better health, as well as financial sustainability, is earlier intervention and population-based initiatives delivered in the community.

National Health Targets

The national health targets are very important for driving overall hospital performance, and have resulted in major improvements in the health outcomes of New Zealanders. Health target performance continues to improve, but DHBs must remain focussed on achieving and improving performance against the targets, particularly the primary care targets, which are still some way from being achieved. I expect DHBs to work directly with primary health organisations and individual practices to drive performance against the primary care targets, and to provide clear and specific plans for achieving all national health targets in their annual plans.

As you are aware, from quarter two of 2014/15, the 62 day Faster Cancer Treatment indicator has become the cancer health target with a target achievement level of 85 percent by July 2016 and then increasing to 90 percent by July 2017. The addition of this indicator ensures continued focus on improving cancer services.

Targets will continue to evolve over time, reflecting a range of dynamic factors. Any changes to current targets for 2015/16 are expected to be known early next year, and may entail adjustments to the electives, more heart and diabetes checks and better help for smokers to quit targets.

I also expect to see elective surgery access further boosted by [\$50 million of] new funding to target more orthopaedic and general surgery, and the development of community-based intervention teams to treat musculoskeletal pain non-surgically.

Clinicians should focus on implementation of the agreed clinical prioritisation tools to support appropriate access for patients.

Tackling Key Drivers of Morbidity

As Minister of Sport and Recreation as well as Minister of Health, I am looking to strengthen the link between physical activity and keeping New Zealanders healthy. Obesity is a major risk factor for diabetes and other chronic conditions, which are key drivers of morbidity. We are currently doing a stocktake of 'what works' to reduce obesity, but in the meantime I expect all DHBs to be considering what they can do to help reduce the incidence of obesity in New Zealand.

2

A key Government priority is reducing the number of children living in material hardship. DHBs are already working closely with other social sector organisations to achieve sector goals in relation to the Government's Better Public Services initiatives and other crossagency initiatives, such as Whānau Ora, Social Sector Trials, Children's Action Plan and Youth Mental Health. I expect district health boards to support cross-agency work that delivers outcomes for children across a range of dimensions – health, education, social and justice.

Refreshed New Zealand Health Strategy

At my request, the Ministry of Health is planning to update and refresh the New Zealand Health Strategy. Once this process is completed, the Strategy will provide DHBs and the wider sector with a clear strategic direction and road map for delivery of health services to New Zealanders into the future. I expect DHBs to take an active part in the consultation for the refresh of the Strategy.

Additionally, a renewed focus on strategic direction should be evident in DHB annual plans for 2015/16. Therefore, all DHBs must refresh their statements of intent in 2015/16 and build these in to their annual plans. I also encourage you to take a strong interest in the Ministry of Health's four-year plan when it is available, as it will provide further clarity on how the sector is expected to manage its resources and prioritise activities over the next four years.

Finally, please keep in mind that the Budget 2015 process will clarify these and other Government priorities, and more information will be provided when available. Please share this letter with your clinical leaders and local primary care networks.

I thank you for the considerable effort you and your team are making, and I look forward to working with you in the future.

Yours sincerely

Hon Dr Jonathan Coleman Minister of Health

Appendix 2 – Regional Collective Decision Making Principles

South Island collective decision making principles

Decision Making Principles

- The parties will be proactive to ensure that decisions required are made in a timely manner. Where delays in decision making are unacceptable to any of the DHBs, they can trigger escalation.
- Decisions will be taken at the lowest level that meets individual DHBs delegated authority policy requirements, and escalation will only be used if agreement cannot be reached after reasonable attempts to resolve disagreement.
- Where decisions are required of the Chief Executive Group and beyond, documentation will include detailed cost benefit analysis and an impact analysis which demonstrates both the collective and individual DHB impacts. Evidence that the South Island CFO's have supported the cost benefit analysis, and that the relevant Senior Leadership (such as GM's Planning and Funding, COO's, HR, CMO's, DON's etc.) have supported the robustness of the impact analysis and recommendations will be included in the papers.
- As much advance notice of decision making requirements will be given as possible. This is particularly pertinent where the decisions are significant or it is reasonably foreseeable that there will be either divergent views or significant stakeholder interest. Advance notice will be considered as a part of the relevant groups planning processes.
- Where a decision is required to be made, this will be noted through the appropriate agenda, together with supporting papers, distributed with no less than 5 working days' notice, unless shorter notice is supported unanimously by the parties making the decision.
- Decisions will be by consensus.
- In the event that a DHB is unable to attend the meeting, either through the substantive member or an alternate, the relevant DHB will either appoint a proxy or they will subsequently confer with the Chair of the meeting to determine whether they can support the consensus reached by the attending parties
- It is noted that each DHB has slightly different delegations policies, and because of this time needs to be provided in any planning process to allow significant decisions to be taken back through individual DHB internal processes. This will be accommodated in planning processes.
- Where consensus agreement cannot be reached the relevant group will agree to either:
 - Seek independent input or mediation to attempt to resolve any disagreement, or
 - Escalate the matter through the escalation pathway noted below.

Key determinants behind whether independent input/mediation/escalation will be used are the relevant group views as to:

- likelihood of successful resolution of the disagreement in a timely manner; and/or
- whether time constraints permit delay.

Where agreement cannot be reached, the parties will document their perspective of the matter to ensure the party or parties to whom the matter has been escalated are fully informed of the difference of views.

Where independent input or mediation is chosen, the District Health Boards will appoint the independent adviser / mediator by consensus decision. In the event that consensus is not reached the Director General or nominee will be the default mediator.

Escalation Pathway

The following is the escalation pathway:

- Operational groups to Chief Executive group;
- Chief Executive Group to Chair Group; and
- Chair Group to Shareholding Ministers.

Appendix 3 – Service Performance Priorities 2015-2018

The South Island Alliance 'Best for People, Best for System' Framework underpins the agreed actions to achieve: improved health and equity for all populations, improved quality, safety and experience of care and best value for public health system resources.

Clinical Services: Sustainability and Clinical Integration

Cancer Services

Reducing the burden of cancer

Lead CEO: David Meates (Canterbury DHB)

Chair: Dr Steve Gibbons, Consultant Haematologist (Canterbury DHB)

Clinical Lead: Shaun Costello, Clinical Director SCN, Radiation Oncologist (Southern DHB)

The Southern Cancer Network (SCN) has been formed to:

- Provide a framework that supports the linkages between the South Island DHBs, DHB specialist service providers, Non-Government Organisations (NGOs), Public Health Organisations (PHOs), and consumers.
- Coordinate implementation of the cancer control action plan across the South Island.
- Provide a formal structure that supports improvement in coordination of population programmes for prevention and screening and the quality of treatment.

Four key focus areas set the direction of this work plan:

- South Island Faster Cancer Treatment.
- South Island Cancer Service Coordination and Quality Improvement People have access to services
 that maintain good health and independence and receive excellent services wherever they are. Services
 make the best use of available resources.
- South Island Clinical Cancer Information System Implementation of the South Island Clinical Cancer Information System (SICCIS): Robust cancer data and information sources are developed and shared that enable informed service development & planning decision-making.
- Southern Cancer Network Support For National Projects to ensure that the tumour standards continue to promote quality of care and guide uniform standards of service provision across DHBs.

Child Health Services

Working together to improve the health outcomes for children and their families living in the South Island

Lead CEO: Chris Fleming (Nelson Marlborough DHB)

Clinical Lead: David Barker, Paediatrician (Southern DHB)

The Child Health SLA (CHSLA) has been formed to improve the health outcomes for children and young people of the South Island through:

- Transforming healthcare services, supporting clinical decision making and the shifting of activities closer to home and communities that children and young people live in.
- Working in partnership and linking with national, regional and local teams/groups to make (and assist the South Island DHBs to make) strategic health care decisions using a "whole-of-system" approach.
- Supporting collaboration and integration across the South Island DHBs (primary, secondary and tertiary interfaces) and inter-sectorial groups/organisations (education, social welfare) to make the best of health resources.
- Balancing a focus on the highest priority needs areas in our communities, while ensuring appropriate care across all our populations.
- Establishing working groups to advise on and guide the development, delivery and monitoring of new initiatives across South Island children and young people's health services.

Six key focus areas set the direction of this work plan:

- Growing up Healthy responding to national strategies for improving children's health outcomes and preventing child abuse.
- Young Persons Health responding to the Prime Ministers youth Mental Health project.
- Access to Child Health Services supporting innovation, good practice and equity.
- Successful Transition into Healthy Adulthood for Children with Lifelong Health Conditions (for example, implementation of cystic fibrous pathway).
- To adequately address the Challenges of Behavioural Problems in Children and Young People. Child Development and Disability Child and Youth Health Compass Report 2013.
- Consumer Consultation.

Mental Health & Addiction Services

Where people in Te Waipounamu/South Island need assessment, treatment and support to improve their mental health and well-being, they will be able to access the interventions they need from a range of effective and well integrated services. The Mental Health and Addictions Service Level Alliance will provide advice, guidance and direction to the mental health sector to strengthen integration while improving value for money and delivering improved outcomes for people using services

Lead CEO: Nigel Trainor (South Canterbury DHB)

Clinical Lead: Dr David Bathgate, Consultant Psychiatrist (Southern DHB)

The Mental Health and Addiction SLA (MHSLA) has been formed to provide advice, guidance and direction to the South Island mental health sector through:

- Best integration of funding and population requirements for the South Island.
- Providing san integrated service across the continuum of primary, community, secondary and tertiary services.

Nine key focus areas set the direction of this work plan:

- Access to the Range of Eating Disorder Services.
- Adult and Youth Forensic Service Capacity and Responsiveness.
- Perinatal and Maternal Mental Health Service options as part of a Service Continuum.
- Alcohol and Other Drug Services.
- Mental Health and Addiction Service Capacity for People with High and Complex Needs.
- Māori Mental Health
- Pacifica Mental Health.
- Workforce.
- Information Services.

Work supported by the Mental Health and Addiction Service Level Alliance

The Mental Health and Addiction SLA will support the delivery of the following projects:

Regional projects supported by the Mental Health and Addiction Service Level Alliance but led by other SLAs and Workstreams

Pathway to improve health outcomes for Māori and Pacific Island youth with mental health conditions (pg. 46 item 3)

Owner: Child Health SLA

Evaluate and implement an e-tool that would meet the needs of youth, in particular Māori and Pacific Island, health outcomes.

Support programmes which reduce youth risk taking resulting in injury/disease from alcohol (pg. 46 item 4a)

Owner: Child Health SLA

In partnership with the Health Promotion Agency, Child Health Service Level Alliance and Public Health Partnership implement findings of South Island Emergency Department scoping exercise

Health of Older People Services

Best Health Care for Older People Everywhere in the South Island

Lead CEO: Chris Fleming (Nelson Marlborough DHB)

Clinical Lead: Jenny Keightley, General Practitioner (Canterbury DHB)

The Health of Older People SLA (HOPSLA) has been formed to lead the development of health and support services for older people across the South Island through:

- Developing sustainable models of care and systems for the delivery of quality health services for older people.
- Providing expertise and guidance around delivery of service to the South Island population over 65 (to those close in age and need).

Five key focus areas set the direction of this work plan:

- Dementia Services.
- Restorative Model of Care.
- Comprehensive Clinical Assessment (InterRAI).
- Falls Prevention & Fracture Liaison Service.
- Advance Care Planning.

Palliative Care Services

High quality, person centred, palliative and end of life care available to the population of the South Island according to need and irrespective of location.

Clinical Lead: Kate Grundy, Consultant Physician in Palliative Medicine (Canterbury DHB)

The Palliative Care Workstream has been formed to promote the development of and equitable access to a high quality palliative care integrated system for all people across the South Island through:

- The development of an integrated palliative care system, and multidisciplinary workforce across the South Island.
- An integrated system approach to local and South Island Palliative care linkages across the spectrum of services and providers to benefit the patient journey.

Four key focus areas set the direction of this work plan:

- Information Technology and Services.
- Hospice and Hospital Palliative Care Services.
- Primary and Community Care.
- Networking and Engagement.

Palliative Care is a workstream within the Health of Older People Service Level Alliance

Cardiovascular services

South Island people enjoy quality of life and are prevented from dying prematurely from heart disease.

Lead CEO: David Meates (Canterbury DHB)

Clinical Lead: Dr David Smyth, Cardiologist & Clinical Director of Cardiology (Canterbury DHB)

The Cardiac Workstream has been formed to provide regional leadership across the South Island Cardiac continuum of care through:

- A supported and planned approach of coordination and collaboration across the delivery of service.
- Reducing inequalities in access to cardiology services across the South Island.
- Enhancing the quality of cardiac health services across the South Island.
- Utilising common referral, prioritisation and condition management tools.
- Ensuring the sustainable management of cardiac services in the South Island.

Ten key focus areas set the direction of this work plan:

- Meeting National Indicators.
- Equity of Access.
- Health Pathways.
- Chest Pain Pathway.
- Guidelines for the Arranged Transporting of Cardiac Patients & Transporting/Retrieving of Emergency/Acute Cardiac Patients.
- Minimum Facilities Guidelines.
- Workforce Training.
- ECG Storage and Sharing.
- Heart Failure.
- First specialist assessment.

Elective Services

Sustainable, equitable elective services for South Islanders

Sponsor: General Managers Planning and Funding (South Island DHBs)

Chief Operating Officers (South Island DHBs)

The South Island Alliance Elective Services Workstream is now led by GMs Planning & Funding and Hospital General Managers who will:

- Explore elective service delivery across the South Island focussing on:
 - Population need and projections
 - Options to support clinically and financially sustainable service delivery into the future.
- Take a health system approach, and analyse secondary and tertiary referral elective services (variability of delivery, capacity, capability, sustainability)
- Prioritise services for attention to future configuration and delivery of elective health services across the South Island, using clinical and management tools such as HealthPathways, consistent systems and processes

Three key focus areas set the direction of this work plan:

- Improve (equity) access to Elective Services.
- Regional/Sub-regional Collaboration (in priority areas), with attention to clinical and business processes.
- Workforce, with attention to recruitment and retention, and collegiality in the South Island.

Work supported by the Electives Workstream

The Electives Workstream will support the delivery of the following national projects:

The Electrical remarkable and the delivery of the following national projects:
NATIONAL INITATIVES
National projects supported by the Electives Workstream:
Project: National Patient Flow
Owner: Nationally led

SOUTH ISLAND REGIONAL HEALTH SERVICES PLAN 2015-2018

The Electives Workstream will support the South Island DHBs, individually and collectively, to achieve the Government's Health Targets and targets for EPSIs Two and Five.

REGIONAL INITATIVES

Improve access to elective services

Delivery against agreed volume schedule, including elective surgical discharges, to deliver the Electives Health Target.

Owner: Individual South Island DHBs

Reported: Individually by the South Island DHBs quarterly

Maintain reduced waiting times for elective first specialist assessment and treatment

Elective Services Patient Flow Indicators expectations are met, and patients wait no longer than four months for first specialist assessment and treatment, and all patients are prioritised using the most recent national tool available.

Owner: Individual South Island DHBs

Reported: Individually by the South Island DHBs quarterly

Lippincott Procedures Manual (pg.82 item 2b)

Agree South Island localisation of Lippincott nursing procedures for Urology Services

Owner: South Island Workforce Development Hub

Major Trauma Services

More patients survive major trauma and recover with a good quality of life

Sponsor: David Meates, CEO (Canterbury DHB)

Lexie O'Shea, Executive Director of Patient Services (Southern DHB)

Clinical Lead: Dr Mike Hunter, Clinical Leader ICU (Southern DHB)

The South Island Major Trauma Workstream has been formed to provide Regional Leadership across the Major Trauma continuum of care through:

• A planned and consistent approach to the provision of major trauma services across New Zealand.

Seven key focus areas set the direction of this work plan:

- South Island Major Trauma Services systems and processes agreed to support people surviving major trauma and recovering with a good quality of life.
- Establishing systems to collect NZ Major Trauma Minimum Dataset.
- Clinical Leadership.
- Workforce.
- Destination policies.
- Inter hospital transfer protocols.
- Spinal cord impairment action plan.

Public Health Services

A healthier South Island population through effective regional and local delivery of core public health functions

Sponsor: Andrew Lesperance, GM Strategy, Planning and Alliance Support (Nelson Marlborough DHB)

Clinical Lead: Ed Kiddle, Clinical Director and Medical Officer of Health (Nelson Marlborough DHB)

The South Island Public Health Partnership has been formed to:

- Sustain effective and efficient regional and local delivery of Ministry-funded Public Health Unit (PHU) services.
- Improve the interface and support between PHUs and other parts of the health system.
- Support population health approaches and planning.

Six key focus areas set the direction of this work plan:

- Alcohol.
- Tobacco.
- Sustainability.
- · Rheumatic fever.
- Māori.
- Other health determinants Housing, Healthy Families and Communities (Obesity Prevention) and DHB Position Statements.

Regional projects supported by the Public Health Partnership but led by other SLAs and Workstreams

South Island Children's Action plan (pg.46 item 1)

Owner: Child Health SLA

Identify and monitor the implementation of agreed South Island regional interventions to better manage safety, reduce family violence and childhood poverty

Support programmes which reduce youth risk taking resulting in injury/disease from alcohol (pg. 46 item 4a)

Owner: Child Health SLA

In partnership with the Health Promotion Agency, Child Health and Mental Health Service Level Alliances implement findings of South Island Emergency Department scoping exercise

Child Health Obesity Prevention programmes (pg47 item 6a)

Owner: Child Health SLA

The Public Health Partnership will keep abreast of Child Health-led programmes and seek opportunities to link with a public health approach.

Child Health Obesity Prevention programmes (pg47 item 6b)

Owner: Child Health SLA

Enhance collaboration with child health dental services.

Stroke Services

Delivering Organised Stroke Services - Best stroke care, everywhere

Clinical Lead: Dr John Fink

The South Island Stroke Workstream has been formed to:

Support the implementation of organised stroke services locally and regionally across the South Island
and thereby encourage consistency and sustainability in the provision and delivery of acute and
rehabilitation stroke services (organised stroke services have been shown to improve the health
outcomes of those who have a transient ischaemic attack (TIA) or stroke).

Three key focus areas set the direction of this work plan:

- Equitable access to Acute Stroke Services for the South Island Population.
- Integrated Stroke Rehabilitation Services for the South Island Population.
- Workforce Planning and Development.

Key Enablers

Quality and Safety Services

Supporting South Island DHBs to make a positive contribution to patient safety and the quality of care

Clinical Lead: Mary Gordon, Executive Director of Nursing and Midwifery (Canterbury DHB)

The Quality and Safety SLA has been formed to:

- Lead, advise and make recommendations to support and coordinate improvements in safety and quality in health care for the South Island DHBs.
- Identify and monitor initiatives that support improvements in national health and safety indicators.
- Report on safety and quality, including performance against national indicators.
- Share knowledge about and advocate for, safety and quality.

Four key focus areas set the direction of this work plan:

- Open for Better Care.
- Promoting Safety 1st Framework.
- Partners in Care.
- Clinical Governance.

Work supported by the Quality and Safety Service Level Alliance

Health Quality and Safety Commission priorities including falls, hand hygiene, SSI and Medication Safety are individually reported on by the South Island DHBs. The South Island Patient Safety Campaign work group is responsible for driving a regional approach to the national programme, they report to the Quality and Safety SLA.

The Health Quality and Safety Commission is actively engaged with the Quality and Safety SLA. In partnership with the Health Quality and Safety Commission the South Island will implement and support the Open for Better Care national patient safety campaign effectively by:

- Involvement of consumers.
- · Maintaining and participating in regional campaign governance through reports and updates to the SLA
- Work with the commission to design the topic-specific approaches to the campaign
- Work with the commission to implement the campaign regionally and locally
- Develop and maintain regional leadership and networks to support the campaign capability for improvement such as ongoing involvement, reports on activities, reviews post implementation

REGIONAL INITATIVES

Open for Better Care campaign

Implement and support the Open for Better Care national patient safety including: falls, hand hygiene, SSI and Medication Safety

Reported: Individually by the South Island DHBs quarterly

South Island Information Services

Lead CEO: Nigel Trainor (South Canterbury DHB)

Clinical Lead: Andrew Bowers, Medical Director, Information Technology & Physician (Southern

DHB)

Programme Director: Paul Goddard (South Island Alliance Programme Office)

Information Technology provides the platform to support improved information sharing that enables new models of care and better decision making. Well-designed Information Technology systems will help the South Island to work smarter to reduce costs, support care pathways and give patients better, safer treatment. Greater reliance on technology requires effective management of Information Technology investments, implementations and ongoing operations. Sustained investment in Information Technology is one of the ways to manage increasing demand with limited resources.

The Information Services, Service Level Alliance has been formed to:

- Oversee the Information Services portfolio of work
- Provide overarching governance to the South Island Information Technology programme and projects
- Provide a point of escalation for the resolution of issues if the Programme or Projects vary from planned time, cost or scope

With guidance from the National Health IT Board, the Information Services, Service Level Alliance has developed a portfolio of projects and programmes. The portfolio is outlined within this Health Service Plan. This has been developed into a long term plan to address the priorities that the Alliance has identified. The four key programmes for the Information Service, Service Level Alliance are the South Island Patient Information Care System, eReferrals, eMedicines and Health Connect South Programmes;

Five key focus areas set the direction of this work plan:

• South Island Patient Information Care System

The South Island Patient Information Care System (SI PICS) is becoming the South Island solution for patient management and administration across the South Island District Health Boards. It will connect health workers with coordinated, consistent access to a single region-wide solution, resulting in improved quality and safety systems. SI PICS is based on a core principle of providing a safe and efficient health care foundation, flexible enough to meet the ever changing demand of health care services provided across the South Island.

How it works

This clinician-driven programme is being developed in close consultation with key people from each of the five South Island DHBs working together as part of the Functional Design Group. SI PICS will not just replace the existing patient administration systems, but embed new and sustainable functionality to provide greater integration and quality of health care.

eReferrals

eReferrals is replacing paper-based patient referrals with an electronic version, enabling more efficient and reliable referrals between health care providers. This is not only improving the transition between health care providers, but is providing better access to, and supporting improving quality of care.

How it works

eReferrals will go directly from GPs to other healthcare providers including secondary care, providing greater transparency in the way DHBs prioritise patients. By reducing administrative burden and improving clinical process, the solution is supporting improved quality of care. The goal is to enable a referral cycle that allows for communication between the referring provider and the provider of which the patient is referred too.

Health Connect South Clinical Workstation

Health Connect South will provide South Island-based clinical staff with a single repository for patient clinical records, streamlining and simplifying access to patient information. This will significantly support improved safety and quality in the region's health care provision. A single system across the South Island ensures that patients and their clinical information are more easily transferred and accessed throughout the district.

How is it works

Health Connect South captures patient documentation and stores it in a patient-centric way, giving clinicians a single overview of medical history within a secure environment. The clinically-led solution also aggregates information from other underlying systems into one clinical workstation. This will eventually become accessible across the region.

This regional, single clinical workstation will provide a single point to access patient information delivering greater efficiencies and supporting improved quality health care.

eMedicines Programme

eMedicines is a suite of IT solutions that is improving and providing greater accuracy of medication management across the South Island health sector.

How it works

The suite, which includes MedChart, an Electronic Prescribing and Administration solution, enables clinicians and nursing staff to electronically chart patients' medications, removing the risk of handwriting being misinterpreted and allows nursing staff to administer and record medications electronically, resulting in a reduction in errors. This is improving patient safety and the quality of health delivery across the South Island. eMedicines is standardising the prescribing and administration of medicines throughout South Island hospitals. These initiatives are not only integrating with each other, but they also connect to wider regional programmes including eReferrals and Health Connect South.

Other Regional Projects

The Alliance is also delivering other projects which include HealthOne, TeleHealth, ED Whiteboard, Patient Portal, eOrdering of Laboratory Tests, eOrdering of Radiology Tests, ECG Project, Mobility Strategy and the South Island Data Warehouse.

Work supported by the Information Services, Service Level Alliance

The Information Services, Service Level Alliance with the role of an enabler, will be support and/or monitoring the delivery of the following projects; South Island National Trauma Project National Patient Flow, eLearning, Safety First, Advanced Care Planning, Growth Charts, Mental Health Module, MOSAIQ, MDM Meeting Management, South Island Clinical Cancer Information System. These projects with either be led by the Ministry or another regional Workstream or Alliance.

NATIONAL INITATIVES

National projects enabled by the IS SLA but led nationally or by DHBs or by other South Island Workstreams

Project: National Trauma Minimum Dataset(pg.64 item 3)

Owner: South Island National Trauma Workstream

Project: National Infrastructure Programme

Owner: Nationally led

Project: National Patient Flow

Owner: Nationally led

Project: National Maternity Solution

Owner: Nationally led and implemented by individual DHBs

REGIONAL INITATIVES

Regional projects enabled by the IS SLA but led by other SLAs and Workstreams

Project: eLearning (pg.80 item 1)

Owner/Lead: South Island Workforce Development Hub

Support the regional eLearning implementation led by South Island Workforce Development Hub.

Project: Safety First (Risk Management Project (RL6) (pg.72 item 2a)

Owner: Quality and Safety SLA

To implement a regional Risk Management solution. This will include reporting of incidents, risks and enables shared clinical learnings from outcome reviews.

Project: Advance Care Plan (pg.53 item 11)

Owner: Health of Older Peoples SLA

Implement an electronic Advance Care Plan accessible to all health care clinicians.

Project: Growth Charts (pg.47 item 7)

Owner: Child Health SLA

To implement a growth chart solution to replace paper-based forms.

Project: South Island Clinical Cancer Information System (pg.43 item 8a)

Owner: Southern Cancer Network

Implement proposed cancer informatics working group structure.

Project: Mental Health Module (HCS) (pg.50 item 12)

Owner: Mental Health and Addiction SLA

To standardise Mental Health workflow to create a trusted source of patient care information. (HCS)

Project: South Island Electrocardiogram Clinical Data Repository (pg.59 item 12)

Owner: Cardiac Workstream

To implement a South Island Clinical Electrocardiogram data repository and software to allow all five South Island DHBs to upload clinical data regardless of the end devices

Information Services SLA Programme Financials for 2015-16

The 2015-16 Information Services SLA Programme Financials is available in the attached spreadsheet. NB: That the investment requirements for Regional Information Service Programme was provided by the South Island Information Services Alliance Programme Manager. This process occurred after the Districts' annual planning cycle. In some cases the values provided in this report may differ from the values shown in the District Health Board Annual Plans. The values shown in this report are estimates at a point in time and will change as Business Cases are finalised and submitted for approval.

(PDF copies of the South Island Health Services Plan 2015 – 2018 South Island IS Programme Financials are available on request).

South Island Workforce Development

Lead CEO: David Meates (Canterbury DHB)

Clinical Lead: Mary Gordon, Executive Director of Nursing and Midwifery (Canterbury

DHB)

Programme Director Training Kate Rawlings (South Island Alliance Programme Office)

The South Island Workforce Development Hub (SIWDH) seeks to improve workforce development, education and training across the South Island to better meet the health needs of the South Island population. This is achieved by:

- Supporting innovative workforce development to empower health professionals to work to their full scope of practice in the new and emerging models of patient care with the support of an appropriately trained unregulated workforce
- Strengthening the education and training network across the South Island, and nationally, focusing on
 encouraging, enhancing and sharing innovative and multi-disciplinary approaches to healthcare
 delivery through effective education and training processes

The work plan for 2015-16 builds on the work of the SIWDH workgroups, which involve over 120 clinicians from across health in the South Island. Further work to identify measures is ongoing and where appropriate these will be noted in the quarterly reports.

Five priorities for 2015-16 include:

- Establishment of an eLearning platform for the South Island.
- Increasing the PGY2 placements in the community.
- Implementation of pilot projects utilising the Calderdale framework (workforce design tool for skill sharing across professions and delegation to the unregulated workforce).
- Continued development of clinical learning packages across the South Island by the Nursing Community
 of Practice.
- Roll out of Lippincott into primary care and community services.

Work supported by the South Island Workforce Development Hub

SIWDH with the role of an enabler, will be supporting and/or monitoring the delivery of the following projects; Mental Health e-Learning package and resources, Mental Health & Addiction vulnerable workforces, Clinical Networks established for identified priority areas within the Electives Workstream, South Island Urology nursing

practice and service delivery, Understanding the Palliative Care workforce requirements, A regional approach to cardiology nurse training developed, Opportunities for training in echocardiography identified, Investigate the feasibility of establishing a National Registrar training rotation that would be regionally based in line with other specialties. These projects with either be led by a regional Service Level Alliance or Workstream.

Regional projects enabled by SIWDH but led by other SLAs and Workstreams

South Island vulnerable workforces (Mental Health & Addiction)are identified and plans established to mitigate these (pg.50 item 11a)

Owner: Mental Health and Addiction SLA

Mental Health & Addictions workforce meets the identified health needs and is fiscally responsible.

Mental Health e-Learning packages and resources across the South Island (pg.50 item 11b)

Owner: Mental Health and Addictions SLA

Mental Health Core Education Group have identified and prioritised a regional suite of eLearning packages.

Understanding the Palliative Care workforce requirements (pg.55 item 3c)

Owner: Palliative Care Workstream

Understand the current PC workforce delivering PC in the community(s)and identify any workforce development opportunities

A regional approach to cardiology nurse training developed (pg.59 item 10)

Owner: Cardiac Workstream

Agree and implement a draft plan developed by CDHB staff

Opportunities for training in echocardiography identified (pg.59 item 11)

Owner: Cardiac Workstream

Action plan developed and implemented.

Investigate the feasibility of establishing a National Registrar training rotation that would be regionally based in line with other specialties (pg.59 item 12)

Owner: Cardiac Workstream

Determine feasibility of establishing a National Registrar training rotation that would be regionally based in line with other specialties

Support Services

Regionally consistent support functions enable the best clinical care at the best value for money.

Lead CEO: David Meates (Canterbury DHB)

Clinical Lead: Dr Geoff Shaw, Intensive Care Specialist (Canterbury DHB)

Chair: Jock Muir, Director, Strategic Projects (Canterbury DHB)

The Support Services SLA (SS SLA) has been formed to:

- Secure better savings by aggregating procurement requirements, improving purchasing power and reducing procurement costs.
- Align with national or other regional activity to deliver the best outcomes for cost and services.
- Procure high value consumable product group, Assets (CAPEX) and non-clinical Services.

Five key focus areas set the direction of this work plan:

- Procurement and savings.
- Project and savings collaboration with other Workstreams of the SLA.
- Manage change in conjunction with national agencies for local and regional benefits.
- Incorporate sustainability practices.
- St John Regional agreement for Patient Transfer service.

Appendix 5 – Glossary of terms

The following table provides definitions on terms used in this document:

Term		Definition
	Acute Care	The provision of appropriate, timely, acceptable and effective management of conditions with sudden onset and rapid progression that require attention.
ACP	Advance Care Planning	ACP is focused on the end-of-life care for an individual and involves both the person and the health care professionals responsible for their care. It may also involve the person's family/whānau and/or carers. The planning process assists the individual to identify their personal beliefs and values and incorporate them into plans for their future health care.
ANZAC Q1		One of the national Registers for Cardiac that is to be implemented. Covers acute coronary syndrome, elective and acute percutaneous coronary interventions.
CAPEX	Capital Expenditure	Spending on land, buildings and larger items of equipment.
CEO	Chief Executive Officer	A CEO is the highest-ranking corporate officer/executive in charge of total management of an organization.
	Continuum of Care	Exists when a person can access responsive services matched to their level of need at any time throughout their illness or recovery.
DHB	District Health Board	District Health Boards are responsible for providing or funding the provision of health services in their district.
ECG	Electrocardiogram	An ECG is used to measure the rate and regularity of heartbeats, as well as the size and position of the chambers, the presence of any damage to the heart, and the effects of drugs or devices used to regulate the heart, such as a pacemaker.
eLearning		E-learning (or eLearning) is the use of electronic media and information and communication technologies (ICT) in education. E-learning is broadly inclusive of all forms of educational technology in learning and teaching.
e- portfolios	Electronic-portfolio	An electronic portfolio is a collection of electronic evidence assembled and managed by a user, usually on the Web.
HCS	Health Connect South	HCS is the South Island Clinical Workstation and provides one place to view clinical information about the South Island patients. It will present information that is currently stored in many different systems and aggregate the information in a patient centric view. That means that clinical staff can access information from any of the underlying systems that are tied to the Clinical Information System. It also has the ability to capture patient related documentation and store it in a patient centric way (see Clinical Workstation).
	Health Pathways	Health Pathways provides a range of information for health professionals responsible for referring to specialty services.
	Health Outcomes	A change in the health status of an individual, group or population which is attributable to a planned programme or series of programmes, regardless of whether such a programme was intended to change health status.
HQSC	Health Quality and Safety Commission	The Health Quality & Safety Commission was established under the New Zealand Public Health & Disability Amendment Act 2010 to ensure all New Zealanders receive the best health and disability care within our available resources. The Commission is also working towards the New Zealand Triple Aim for quality and safety outcomes.
HWNZ	Health Workforce New Zealand	HWNZ was formed to lead and co-ordinate the planning and development of the health and disability workforce. It ensures that we have a high quality, fit-for-purpose workforce and that workforce issues are aligned with planning of services.

Term		Definition
	Integration	Combine into a whole or complete by addition of parts.
InterRAI	International Resident Assessment Instrument	Comprehensive assessment tool.
	Kaumatua	Māori Elder.
	Kuia	Elderly woman.
МоН	Ministry of Health	The Ministry of Health aims to ensure that the health and disability support system works for all New Zealanders. The Minister of Health has overall responsibility for the health and disability system.
MOSAIQ		MOSAIQ is a complete patient information management system that centralizes radiation oncology, particle therapy and medical oncology patient data into a single user interface, accessible by multi-disciplinary teams across multiple locations.
MDMs	Multidisciplinary meetings	MDMs are regular meetings at which health professionals from a range of different specialities consider relevant treatment options and together develop a recommended individual treatment plan for each patient.
NHB	National Health Board	The NHB was established in November 2009 and is made up of a Ministerial appointed Board and a branded business unit within the Ministry of Health.
	National Health IT Board	The IT Health Board leads the implementation and use of information systems across the health and disability sector. They ensure health sector policy is supported by appropriate health information and IT solutions.
NGO	Non-Government Organisations	In the context of the relationship between the Health and Disability NGOs and the DHBs, NGOs include independent community and iwi/Māori organisations operating on a not-for-profit basis, which bring a value to society that is distinct from both Government and the market. In reality this will mean that any profits are put back into the organisation, rather than distributed to shareholders.
NZULM	NZ Universal List of Medicines	NZULM is New Zealand's national dictionary of medicines list for universal use across the sector. It is updated regularly, and is readily accessible via a website and participating prescribing and dispensing software systems and medicines information sources (including the NZ Medicines Formulary).
	Primary Care	Primary Care means essential health care based on practical, scientifically sound, culturally appropriate and socially acceptable methods. It is universally accessible to people in their communities, involves community participation, is integral to, and a central function of, the country's health system, and is the first level of contact with the health system.
РНО	Primary Health Organisation	PHOs encompass the range of primary care and practitioners and are funded by DHBs to provide of a set of essential primary health care services to those people who are enrolled in that PHO.
	Population Heath	Population health refers to the health outcomes of a group of individuals, including the distribution of such outcomes within the group. It is an approach to health that aims to improve the health of an entire population. One major step in achieving this aim is to reduce health inequities among population groups. An important theme in population health is importance of social determinants of health and the relatively minor impact that medicine and healthcare have on improving health overall.
	Public Health	The science and art of preventing disease, prolonging life and promoting health and efficiency through organised community effort. A collective effort to identify and address the unacceptable realities that result in preventable and avoidable health outcomes and it is the composite of efforts and activities that are carried out by people committed to these ends.
RL6		Incident Management software solution.

Term		Definition
	Secondary Care	Specialist care that is typically provided in a hospital setting.
SIWDH	South Island Workforce Development Hub	SIWDH is designed to support more effective and integrated health professional training, covering a population of approximately one million people. SIWDH works collaboratively across each region to oversee the planning and delivery of clinical training, ensuring it meets the needs of trainees and local communities and is aligned with regional service planning.
	South Island Alliance	The South Island Health Alliance, a partnership between the five South Island District Health Boards, is working to support a clinically and financially sustainable South Island health system where services are as close to people homes as possible.
	South Island Alliance Programme Office	The South Island Alliance Programme Office supports the regional activities of the South Island Alliance.
SIHSP	South Island Health Services Plan	Regional Health Services Plan provided by the South Island Alliance.
SLA	Service Level Alliance	Agreed priority area for the South Island Alliance.
	TePou	Te Pou's purpose is to enhance people's health and wellbeing by developing a sustainable workforce delivering quality services. To achieve this, they provide health organisations with tools, products and resources to help them build a strong and enduring workforce and improve their services.
WIAS	Walking in Another's Shoe	WIAS is a dementia workforce education programme being rolled out around the South Island.
	Whanāu	Family.
WHO	World Health Organisation	WHO is the directing and coordinating authority for health within the United Nations system. It is responsible for providing leadership on global health matters, shaping the health research agenda, setting norms and standards, articulating evidence-based policy options, providing technical support to countries and monitoring and assessing health trends.
	Workstream	Other areas of regional activity of the South Island Alliance.
